BOUNTIFUL RIDGE PENNY PLANTS

An Extra Plant for only a Penny

RHUBARB—Valentine Red (6411) Large red stalks grow in profusion. Just the thing for favorite pies and desserts. Regular price, 3 for \$3.60. **4 FOR \$3.61**

ASPARAGUS—Mary Washington (6402) Rust resistant and vigorous. The standard of the trade for years. Heavy, 2 year, No. 1 plants. Regular price, 50 for \$6.95. **75 FOR \$7.20**

BLACK RASPBERRIES—Bristol (6304) Just a bit earlier than Cumberland, but so good. Vigorous and hardy. Heavy plants. Regular price, 25 for \$9.50. **30 FOR \$9.55**

BLUEBERRIES—Herbert (6512) One of the best big new varieties. Fruits consistently and heavily. Sturdy 18-24 in. plants. Regular price, \$2.45 each. **2 FOR \$2.46**

SMOOTHSTEM BLACKBERRY (6204) Big berries, no thorns . . . easiest of all to pick. A wonderful invention. Regular price, 10 for \$4.95. **12 FOR \$4.97**

NOVELRED NECTARINE (2010) A freak of nature. Part nectarine and part peach. Either way, the fruit is delicious. Try some the easy way. Regular price, 3-4 ft. trees, \$3.75 each. **2 FOR \$3.76**

PEACH TREES—Freezer SPECIAL Get one Hale Haven (0138), one Redskin (0151) both 2-3 ft. Regular price, 2 for \$6.00. Add one Belle of Georgia (0148) same size for 1c. **3 FOR \$6.01**

ROSA MULTIFLORA (4201) Low cost, natural living fence. Needs no maintenance and grows most anywhere. Heavy 12-18 in. plants. Regular price, 25 for \$6.00. Get 10 more for 1c. **35 FOR \$6.01**

GOLDEN AMBER RASPBERRY (6340) A new taste and color treat. Large, sugar-sweet, golden berries ripen later than most and extend the season. Regular price, 6 for \$3.25. **8 FOR \$3.27**

DOUBLE RED DELICIOUS APPLE (1037) Most famous of all apple varieties. Big red juicy fruits. Easy to grow. Large 2-3 ft. trees. Regular price, \$2.75 each. Get one Yellow Delicious (1032) (pollinator) for 1c. **2 FOR \$2.76**

BLUE CONCORD GRAPES (6002) America's favorite blue grape. Large, sweet, juicy. Heavy bearer and disease resistant. Heavy 2 yr. vines. Regular price, 3 for \$2.85. **4 FOR \$2.86**

BIG RED RASPBERRIES—Ott's Penridge (6320) Just the best of the red raspberries. Big luscious berries from vigorous, heavy vines. Regular price, 10 for \$5.50. **12 FOR \$5.52**

SANTA ROSA PLUM (2510) Just the best big red plum for most areas. Trees are large, vigorous, and self-fertile. Generous 18-24 in. trees. Regular price, \$3.00 each. **2 FOR \$3.01**

HANSEN'S BUSH CHERRY (3532) Small bush with white flowers and big, red cherries. Just right for pies, jams, or jellies. Self-fertile. 18-24 in. Regular price, 3 for \$3.75. **4 FOR \$3.76**

HALL'S HARDY ALMOND (5035) Vigorous, hardy peach-tree-like plant. Bears early. Pink flowers and beautiful red fall foliage. 4-5 ft. Regular price, 2 for \$8.50. **3 FOR \$8.51**

CHINESE CHESTNUTS (5050) Early bearing, fast growing, blight resistant trees. Enjoy eating roasted nuts from your trees, SOON. 18-24 in. Regular Price, 3 for \$4.50. **4 FOR \$4.51**

HAZELNUTS—American Filberts (5042) Attractive bushes. Bear early. Produce heavy crops of wonderful nuts. Good for windbreaks, too. 2-3 ft. Regular price, 2 for \$4.75. **3 FOR \$4.76**

Lona Baldwin PINK FLOWERING PEACH (4101) Very pretty, upright grower with delicate pink flowers and small, edible fruits. An excellent windbreak plant. 3-4 ft. Regular price, 3 for \$10.50. **4 FOR \$10.51**

RED FLOWERING CRAB—Almey (4102) A thing of beauty for all seasons. Small, semi-dwarfish trees adapt to most any location. 3-4 ft. Regular price, \$3.75 each. **2 FOR \$3.76**

METHLEY PLUM (2502) Big, early, purple, delicious, and easy to grow. Self-fertile. Heavy 2 ft. plants. Regular price, \$3.25 each. **2 FOR \$3.26**

A Rare Opportunity . . .

Few times in life does one have the distinct honor of introducing a completely different product to his friends and neighbors. We are pleased to make available to our customers the delicious home-made jams, jellies, and preserves from the North River Jam Kitchen that we have grown to enjoy so much. The Sawyers raise their own fruit, much of it from Bountiful Ridge trees, and make the taste-satisfying spreads in open kettles, using only sugar, fruit and spices. We hope you'll find these products as delicious and enjoyable as we at Bountiful Ridge have discovered them to be.

Select your package from this list . . .

PEACH PRESERVES—PEACH JAM—FIG JAM
CRABAPPLE JELLY—PEAR CONSERVE—PEACH BUTTER

(Sorry . . . the Grape Preserves shown are not available because of a poor grape crop.)

Buy any 3 listed above . . . Postpaid \$3.75

Any 6—Mix or match . . . Postpaid \$7.25

Case lots of same kind . . . 12 for \$12.95 postpaid

Mixed Case lots . . . 12 for \$13.95 postpaid

All jars are regular 8-oz. size.

Add 50c for Packing, Handling and Insurance for each order.

THE KEMPS OF BOUNTIFUL RIDGE

August 1, 1969

Dear Friends,

A word of "Thanks" must be expressed to each of you who shopped with us this past year. Many of you are old customers—well acquainted with our quality stock—while many of you shopped Bountiful Ridge for the first time. Together, all of you made our year a very successful one. Your many compliments encourage us in our continuing effort to provide you with the best in plants and service.

Our catalog has changed a bit; trying to keep pace with your "growing" needs. But, the plant quality and "personal touch" service remains the same. We hope you will take advantage of the Bonus Plant Offers, outstanding collections, and free gifts by taking the time to place your order and find the joy of shopping by mail. Your plants will be shipped to you at the proper planting time for your area and you're always protected by our 3 Point Guarantee.

Our plants look great . . . Avoid delay and disappointment by ordering when you receive this catalog. Your orders will be most appreciated.

Sincerely,

President

3-Point Guarantee

1. ALL STOCK GUARANTEED TO ARRIVE IN A-1 CONDITION. All shipments are insured. Notify us and the carrier at once of damage and claims will be filed for losses. Duplicate orders for damaged stock will be shipped at once.

2. ALL STOCK IS GUARANTEED TRUE-TO-NAME. Every precaution is taken to insure trueness-to-name. In the event that any plants prove not true-to-name, we will replace the plants or refund the purchase price. Such refund or replacement shall be the exclusive extent of our responsibility.

3. ALL STOCK IS GUARANTEED TO START TO GROW, providing our planting instructions are followed and normal care is given. Should any plant fail to do this, notify us direct by July first and replacements will be sent the following season without charge. After this date, we will replace unsatisfactory plants at one-half the purchase price. You pay transportation on all replacements. This guarantee covers all normal losses. Heavy and unusual losses due to conditions beyond our control will be settled satisfactorily with the customer.

The guarantee and remedies expressed above shall be the exclusive recourse available to the buyer. In order to provide a quality product at competitive prices, we cannot be responsible for incidental or consequential damages, and must limit the maximum recourse to replacement or refund as described above.

Premium Peach Varieties: Add 10c per tree to the above prices for trees of Dawne, Redwin, Sunshine, and Kenlate.

We want you to plant BOUNTIFUL RIDGE trees. Our trees are as good as can be produced. When you need more than 250 peach trees, send us your list and we will quote you special prices consistent with market conditions at that time.

DAWNE

NOTE: The number printed just after the variety name is a new CATALOG NUMBER. Please use this number, as well as the variety name, when ordering. The ripening order and variety use chart is listed on page 6 for your use. Please, USE NAME and NUMBER for each variety or collection you list on the order blank or in your letter.

✓ **REDWIN** (0101) This is an excellent variety for local and roadstand use. The fruits are medium sized, have good color and fine quality. Heavy thinning and early spraying are required for best results. Redwin has white flesh that clings to the pit until soft ripe. Its good red blush is quite attractive for such an early variety.

Trees of Redwin are vigorous, hardy in wood and bud, early bearers and heavy producers. Since Redwin fruits ripen so early—just 60 short days after bloom—only maintenance sprays are needed the rest of the season.

✓ **SPRINGOLD** (0102) A new very early variety—two weeks before Cardinal—which has good color and firmness. Springold should be well adapted to the south-east and other areas needing a very early peach. The flesh is yellow, with good flavor for such an early variety. Fruits are round, and about 80% covered with a bright red blush. Why not try a few this year?

✓ **DAWNE** (0103) The earliest yellow freestone peach known, Dawne is a real sight to see. The medium sized fruits are more than half covered with an attractive red blush laid over a golden yellow ground. The flesh is melting and of exceptionally high quality. We have found fruits of Dawne are completely satisfactory for most any use.

Trees of Dawne are vigorous, hardy in wood and bud, bear early and heavily. Thinning is required to produce good crops of well-sized fruit. The blossoms are very showy and resistant to spring frost. Dawne ripens 8 to 10 days before Early-Red-Fre and at a time when its good color and flavor are really appreciated.

DEAR SIR:

Received my small order yesterday and planted today. Would like to thank you for prompt delivery and excellent condition of these plants on arrival, those responsible for shipping do a swell job. I am pleased to recommend your nursery to friends and neighbors.

George Riley
Ohio

CANDOR (0104) A new yellow-fleshed, semi-free-stone peach that ripens just before Earlired. The fruits are round and about $\frac{3}{4}$ covered with a bright red blush when mature. The flesh is fine textured, of good quality and very resistant to browning. Trees are productive, moderately vigorous and somewhat resistant to bacterial spot. Fruits are of good size and buds seem rather tolerant of spring frost.

SUNHAVEN

EARLIERED (0105) A cross of Redhaven made at Beltsville, Md. that ripens 2 to 5 days earlier than Cardinal and completes harvest before Sunhaven. Fruits are medium sized, with very light pubescence, and colored with a bright red blush over a golden yellow ground color when mature. The flesh is yellow, firm and of good flavor; a cling when firm ripe. Trees are vigorous, and dependable bearers, and moderately susceptible to bacterial spot. Earlired should be thinned early and hard for best size.

REDCAP (0106) Ripens just before Dixired and resembles Dixired very much. A clingstone, medium size, round, with light pubescence. Attractive red blush covers most of the peach. The flesh is yellow, firm but melting, and of good flavor. Trees are moderately vigorous and productive. Buds require 750 hours chilling.

CARDINAL (0107) Ripens four days ahead of Dixired. Fruits are clingstone, medium size, round, light pubescence. Well covered with attractive red blush over yellow ground. Flesh is yellow, firm and of good flavor. Chilling requirements about 900 hours.

Most peach orchards are set 20x20 ft., 18x22 ft., 20x24 ft., etc. We suggest an original spacing of 10x15 ft., giving 290 trees per acre. At the 5th or 6th year, take out every other tree in the 10-ft. row to have a permanent planting of 15x20 ft. We know your site location may not allow such a plan; but if this plan or some variation is used, it is possible to earn \$1,000.00 or more EXTRA per acre, per year, because of the additional early yields from the extra trees.

GENTLEMEN:

All the peach trees sent to me are coming along very good. I am well satisfied with your products from the Bountiful Ridge Nurseries.

Harold Thranhardt
New York

RIPENING and VARIETY USE CHART

This new, up-to-date chart should be helpful in setting up your new planting. Varieties which ripen in the same season are listed with sub-letters, as we have done for years. The varieties are listed in a relative order, so the chart may be used in any area.

The variety use symbols are meant as a guide. Planting area may dictate that other varieties be used.

Best Use	Ripening Order	Best Use	Ripening Order

+ Varieties Best for Local Markets

DEAR SIR:

Let me take just a moment here and try to tell you all how much I have appreciated doing business with you and your company. The letter I received after the order of asparagus roots was one of the nicest gestures I have ever seen a company do. Now I know this type of close relationship with customer is costly but, Sirs, believe me, it's worth it. Because I have been treated so very, shall I say, humanly, you now have a devout new customer. So, again thank you, for making a routine customer feel so special. With a policy such as this you will surely grow and prosper.

Mr. & Mrs. Mitchell Rymasz
West Virginia

DIXIRED (0108) A round, medium-sized clingstone, with light pubescence. A beautiful red blush covering three-fourths of the surface gives Dixired a pleasing appearance. Flesh is yellow, firm but melting, and of good flavor. Dixired has unusual firmness and a slow rate of softening for an early peach. It is an excellent variety from the Carolinas northward into Canada because of its fine appearance and shipping ability.

ERLY-RED-FRE (0109) For unexcelled size and quality, it is the best early white peach known. Growers everywhere still rave about Erly-Red-Fre. No other early peach has been as profitable and universally adaptable. There is still a place in nearly all plantings for this fine peach.

Fruits are large, averaging over 2½ inches in most cases without thinning. Color is never a problem; the fruits turn red at least on one side well before harvest date. Quality is exceptionally good. Erly-Red-Fre has long been known for its shipping and keeping qualities.

Trees are very vigorous, hardy in wood and bud, and produce large annual crops. Erly-Red-Fre resists bacterial spot and bears at a young age. Harvest time is about 95 days after bloom, in time to save expensive sprays and maintenance costs. Increase your profits by adding Erly-Red-Fre to your plantings now.

SUNHAVEN (0111) True Sunhaven or Early Sunhaven matures about 10 days earlier than Redhaven. Fruit is large sized, nearly round and uniform in shape. Color is much like Redhaven, largely a pretty bright red. Flesh is clear yellow, fine textured, firm, of good flavor, and resistant to browning. It is a partial cling until full ripe. Fruits keep well and handle easily for such an early peach. Trees are large, vigorous, and productive. Sunhaven is an excellent early fresh market variety for the central and northern peach areas. **Do not confuse this Sunhaven with Late Sunhaven, which ripens with Redhaven or later.**

SOMERSET (0114) A fine new yellow-fleshed freestone peach that originated here at Bountiful Ridge as a chance seedling. Fruits of Somerset are large, round, and very attractive. Several days before maturity, the fruits become covered with a beautiful red blush that is spread over a golden yellow ground color. The skin is tough and rather thick which makes Somerset a valuable variety for commercial use.

Fruits ripen at Princess Anne with, or just after, Sunhaven but before Redhaven. Size and appearance excellent for such an early peach. Fruits average much larger than Redhaven or Sunhaven and crops are borne just as consistently. The flesh is coarse in texture, but melting and of fine flavor.

Trees of Somerset are vigorous and sturdy growers that produce annually heavy crops. Buds are winter hardy and frost tolerant. We recommend trial of this new variety in all areas where a need for a large, attractive early yellow freestone peach is present.

JERSEYLAND—N.J. 135 (0115) An early, large, firm, attractive, yellow-fleshed freestone ripening a few days before Golden Jubilee. It hangs well to the tree and is an excellent shipper. Tree is hardy, sets fruit buds freely, and comes into bearing at an early age. Jerseyland is quite popular from the Carolinas to eastern New York.

SUNSHINE

✓ **SUNSHINE (0113)** An EXTRA-HARDY new sport of Redhaven that ripens 5 or more days earlier than its parent. The flesh is a clear yellow, is melting and with good flavor, and resists browning. Sunshine fruits are completely freestone at picking time. Size is equal to, or larger than, Redhaven on trees of comparable age.

Trees of Sunshine are vigorous, healthy, somewhat resistant to disease, upright in growth, and begin bearing at an early age. Experience the last several years has shown that the buds and wood are above average in hardiness and are most tolerant of spring frost.

Our supply of trees this year is excellent. We hope you will be able to order early and get your orchard of Sunshine trees started.

Nematode-Resistant Peach Trees

ON NEMAGUARD ROOTSTOCKS

New Nemaguard seedlings have proven to be resistant to the common nematodes found in most peach areas. Use of these rootstocks will enable you to continue growing peaches profitably in infested areas. Nemaguard is a new seedling rootstock introduced by the U.S.D.A. that is far superior to Yunnan and other older and similar nematode-resistant rootstocks. We are now using ONLY Nemaguard as a nematode-resistant understock for peach.

VARIETIES AVAILABLE

Blake (0244)	Redskin (0251)
Loring (0234)	Rio-Oso-Gem (0263)
Redhaven (0218)	Washington (0227)

PRICE Add 10¢ per tree to all prices listed on page 5 on whatever grade or quantity of trees you wish. This extra charge is necessary to cover the additional expense incurred in the production of these trees.

VARIETIES Our variety list on Nemaguard is limited. However, we will be glad to custom-bud trees on Nemaguard root of any peach variety we list, have growing in our test block, or from your own budwood. *Please write for further details about this service.*

**SPECIAL TREATMENT MAKES OUR
PEACH TREES "BETTER THAN EVER"**

At No Extra Cost To You

Bountiful Ridge is pleased to offer "At No Extra Cost," peach trees grown from budwood that has been heat treated to insure its "Freedom From Virus Disease." Our trees are being grown many miles from any known source of little peach, peach yellows, red suture, or X-disease and, because of this isolation, are essentially virus free.

We believe that our "essentially virus free" peach trees will give you, Mr. Planter, the best stock that money can buy. Combine this new practice with our regular propagating procedures—selected budwood, hardy and disease-resistant rootstocks, specially treated soils, continuous inspection, rigid storage control—and you have the best peach trees for any use that it is possible to produce. All of our peach trees, both dwarf and standard size, have been so treated. It will not, therefore, be necessary to note your wish for Virus Free trees on your order.

CORONET (0116) A good sized, highly colored, yellow peach ripening a few days before Redhaven. The flesh is firm, tends to stick to the pit until fully ripe, and has a very good flavor. A bright red blush over a good yellow ground color makes Coronet very attractive. Trees are vigorous and productive. Blossoms are small petaled, self-fertile, and require 800 hours to break dormancy. A very fine variety for near and distant markets.

SENTINEL (0117) A new low-chilling variety for southern areas that ripens a bit later than Coronet. Fruits are round, medium sized, freestone, and 75% covered with a red blush over a good yellow ground color at maturity. The flesh is yellow, firm and of good flavor and texture. Trees are vigorous, productive, and self-fertile. Sentinel was released because it is superior to other bacterial spot resistant varieties in its season. We suggest its trial in areas where bacterial spot is particularly troublesome.

REDHAVEN (0118) Hardly enough can be said about this fine peach, the standard of all early peaches. It colors a beautiful red and golden yellow. The skin is smooth, almost fuzzless, resembling J. H. Hale. Flesh is very firm, smooth textured, and of good flavor. Fruits are medium sized, round, uniform, and of excellent appearance. Redhaven is one of our most versatile varieties. It is good for freezing, canning, local and distant markets. Proper thinning will allow the vigorous and very productive trees to be some of your most profitable ones. Wood and buds of Redhaven are hardy and disease resistant.

COMANCHE (0120) A Redhaven type peach that ripens about with Redhaven. Size is exceptionally good, with little thinning required. Fruits are attractive, with firm yellow flesh, and semi-free with no split pits. Comanche has a desirable crop load with larger size fruits than Redhaven.

DEAR SIR:

I wish to compliment the fine quality of your trees. Thank you.
Gerald R. Kramer
Indiana

MARLAND PEACH

CUMBERLAND (0121) The tree is a vigorous grower. The fruit is attractively colored with red, oval in shape. Flesh is white, almost free. Ripens just before Jubilee. Cumberland continues to be popular in all peach sections.

GOLDEN JUBILEE (0122) An old stand-by variety that is still popular for home and near-by markets. Fruits are medium to large, attractive, freestone, and of good flavor. Jubilee will be more attractive and firmer if balanced fertilizers are used. The tree and buds are unusually hardy, resisting low temperatures better than Elberta. Blossoms are self-fertile and are borne in abundance.

WASHINGTON

RANGER (0124) A fine-looking yellow freestone peach ripening with Golden Jubilee. Medium to large size, almost round, with light pubescence, highly colored with bright red blush. Flesh yellow, medium firm, medium textured, good flavor and suitable for canning or freezing. Tree is vigorous and productive, showing marked resistance to bacterial leaf spot. Blossoms medium sized, self-fertile, usually open after Elberta.

KEYSTONE (0125) Keystone ripens just ahead of Triogem. The fruits are large, highly colored, round, light pubescence, bright golden ground color. Flesh is yellow, firm, smooth textured and of good flavor, and a freestone. Trees are vigorous and productive, with less bacterial spot than Southland or Elberta. Blossoms are self-fertile, require 750 chilling hours.

TRIOGEM—N.J. 70 (0126) An early, oval, red all over, firm, yellow freestone peach ripening about two days after Golden Jubilee. The trees are medium in size, hardy and heavy bearers. Trees require good soil and good culture for best results. Triogem has fruited over a wide area and has gained popularity due to heavy yields, good marketing traits, and hardiness of tree.

WASHINGTON (0127) A fine new peach from Virginia that has outstanding qualities of color, size, flavor, firmness of flesh, and fine texture. The buds are extremely resistant to injury from spring frosts. It ripens about three days after Triogem and just before Sunhigh. Trees are vigorous and productive. Buds have excellent pollen and are self-fertile. Washington will do well from southern Virginia northward wherever spring frosts are troublesome. Use Washington with Madison and Jefferson for season-long coverage of frost-resistant peaches.

DEAR SIR:

I wish I had more room at this time for more fruit trees, but I am well pleased with what I have purchased from you in the past; especially your Sunshine, Redwin and Dawne peach and your King Luscious apple. They are out of this world. Thanks again for not forgetting this single item. You people are on the ball.

Fraizer W. Stallings
Tennessee

WHY PLANT BOUNTIFUL RIDGE PEACH TREES?

1. Only selected bud stock of known parentage used in propagation.
2. Our rootstocks are the best money can buy—selected for rapid growth, hardiness, and disease resistance.
3. Only soil which has been especially treated to produce high food value for normal development is used to grow our trees.
4. Continuous inspection of trees from seedling to finished tree, with correct spraying compounds, timing and technique to keep trees healthy while growing.
5. Rigid control of varieties from cutting of budwood—checking workers during budding time—correct charting of all varieties—more checking at digging time plus further checking in storage insures true-to-name trees.
6. Constant searching for new and better varieties and improved strains of old commercial favorites goes on year after year by men trained to recognize all factors which influence the selection of finer trees and varieties.

COLORA (0129) An outstanding, hardy, early, yellow freestone peach with high color, superb quality, size, and hardiness. Colora is our own introduction of a frost-resistant peach. Trees have withstood temperatures during past winters of about 17 degrees below zero, when most other varieties were wiped out by these low temperatures. The peach is an attractive yellow freestone ripening just after Golden Jubilee.

SUNHIGH—N.J. 82 (0128) A large, bright red, smooth peach which colors well before it ripens and softens slowly, making it a good commercial peach. Flesh inclines to adhere to the pit when hard ripe, but is generally freestone. Tree is spreading in growth, and dormant buds are hardy. Seems to do best in hilly sections and requires thorough summer spraying.

RICHHAVEN

Most fruit trees respond best to balanced plant food. A good "rule of thumb" to follow is: "Apply $\frac{1}{2}$ pound of 10-10-10 fertilizer for each year the tree has been in its present location." Make the application in late winter or early spring and spread evenly in the area covered by the tree's branches. Do not apply regular fertilizer in the planting pits of new trees. Use only Special, New, Long-acting Formulas according to directions at planting time.

- ✓ **SUNQUEEN** (0130) Formerly tested as New Jersey 210, Sunqueen ripens in the Sunhigh season. It is very attractive, hardy, and bears early. Tests have shown that it is not as susceptible to bacterial spot as Sunhigh. We suggest Sunqueen be tried wherever a good replacement for Sunhigh is needed.

- ✓ **SOUTHLAND** (0131) Yellow-fleshed variety ripening in Sunhigh season. Fruit is a freestone, medium to large size, round, and has little fuzz. Color is attractive, with a light red blush covering about half the peach at shipping stage. Flesh is yellow, firm, slow softening, medium textured, good flavor. Trees are vigorous and productive, blossoms large, self-fertile.

- ✓ **BABYGOLD #5** (0133) A good yellow-fleshed clingstone peach that ripens about 3 weeks before Elberta and is well adapted for the canning trade. Fruits are large and attractive. Trees are productive and hardy.

- ✓ **LORING** (0134) A new yellow freestone with wide adaptability. This promising new peach resembles Jubilee in color and shape, but is much firmer and does not soften at the suture or the tip. It has an attractive bright red and yellow color over a yellow ground color. Loring ripens about two weeks ahead of Elberta. It has been found an excellent variety for fresh market and processing use.

- ✓ **JULY ELBERTA—Burnett Elberta** (0135) A large, medium early, freestone peach ripening with Hale Haven. Golden yellow color overspread with red. It can be picked for shipping about four days before ripening, because of its early color. The quality is excellent for canning and fresh eating. It shows better than average results when frozen. The variety does well in all peach sections.

- ✓ **REDGLOBE** (0136) Ripens 15 days before Elberta. Fruits large, round, with light pubescence. Skin is highly colored with red over a good yellow ground color. A freestone. Complete absence of red in the flesh makes it an outstanding canning peach. Very good quality. Chilling requirements about same as Elberta. Blossoms are large and self-fertile.

- ✓ **RICHHAVEN** (0137) Fruits are large, uniform in size and shape. Color a bright red blush with stripes of red and gold laid over a bright golden ground color. Fuzz is unnoticeable and an unusually thick, tough skin adds to its handling and shipping ability. Flesh is a clear yellow with moderate reddening around the pit. Entirely a freestone when ripe. Ripens with Hale Haven, or 14 days before Elberta.

HALE HAVEN

- ✓ **HALE HAVEN** (0138) Large, oval-shaped fruits are borne on a strong, thrifty tree that is resistant to most common peach diseases. The skin is tough, and the flesh is of such texture that it will not bruise easily. A beautiful red color and excellent flavor attracts the most exacting buyer. Hale Haven is probably our best peach for quick freezing.

- ✓ **GLOHAVEN** (0139) A new attractive yellow freestone peach from Michigan that ripens two weeks before Elberta. Trees are vigorous, productive and at least average in wood and bud hardness. Fruits are nearly round, and maintain large size even when tree is loaded. Skin is tough, mostly red over deep yellow ground color, with little fuzz. Flesh is clear yellow, and because of its excellent canning and shipping ability, Glohaven promises to be an outstanding general-purpose variety.

- ✓ **CHAMPION** (0140) Long known as an excellent white peach, Champion fills a definite need in this particular season. Its large, quite regular and beautiful, freestone fruits ripen between Cumberland and Belle of Georgia. The tree is very hardy and productive. Champion is the best variety to fill this part of the white peach season

PLANTING TIPS

- (1.) Dig a large hole. Put topsoil in a separate pile.
- (2.) Trim broken roots away and spread them evenly. Position tree so that final depth will be just a bit deeper than the joint of the bud union, and refill about $\frac{2}{3}$ of the hole with good topsoil. Water well, let settle, and finish filling the hole. Use excess soil to build saucer to hold water through season.
- (3.) Trim back side branches to two buds and main stem to 24 to 30 inches.
- (4.) Cultivate lightly the first season; or treat the area with herbicide; or mulch with good hay or similar material.
- (5.) Newly set trees may be fertilized at planting time with Special, Slow Acting pellets or packets; or with regular fertilizer in very small quantities 4 to 6 weeks after growth begins.

Organic Gardening and Farming

Dear Friend:

Here's a "No Money Down" invitation to get you to see for yourself the NEW ORGANIC GARDENING magazine. We're sticking our necks out as far as we can, so you will return the attached card that brings you the latest issue of the magazine PLUS a free book that shows how to use the most successful methods ever proven for the best lawns, roses, vegetable gardens, trees, and shrubs you ever dreamed of. Here is our offer:

Mail the attached card today, BUT SEND NO MONEY.

We will send you a copy of "BEST GARDENING IDEAS I KNOW," the latest issue of Organic Gardening Magazine, and enter an introductory subscription of 10 months for \$3.00. (A savings of \$1.90 on the regular subscription rate.)

If -- and only if -- you decide that future issues of the magazine are worth getting and will help you to better garden results, then you can pay the small subscription cost.

YOU OWE US NOTHING -- AND MAY KEEP EVERYTHING WE SEND YOU -- if you don't want future issues. All you need do is write "cancel" on the invoice you receive, and that's it.

See for yourself why over 400,000 readers say Organic Gardening Magazine is "better than ever." Get easy-to-follow, expert advice on building your soil's fertility, vegetable and flower growing, insect control, and new plant developments. Please mail the postage-paid card today.

Sincerely,

Jerome Ibb

GLOHAVEN

✓ **SUNCREST (0141)** A new, large, round, yellow freestone that ripens about 10 days earlier than Elberta. Fruits have light pubescence and are two-thirds covered with a bright red blush over a golden yellow ground color. The flesh is firm enough for distant shipment and is of good flavor. Trees are vigorous and productive. Blossoms are large petaled and self-fertile.

✓ **SULLIVAN'S EARLY ELBERTA (0142)** An old favorite that leads the early Elberta season. Sullivan ripens ahead of the regular Early Elberta and Belle of Georgia. Fruits average large in size, with extra fine quality and shipping ability. The tree and fruit characteristics are identical with Elberta.

DEAR SIRs:

Received the trees on the day after they were shipped, in good condition. Got them planted right away. Am very pleased with them.

Eleanor Gershawitz
Virginia

Experts start your orchard using only best seedling stock and budwood.

✓ **MADISON (0143)** The newest frost-resistant peach to come from Virginia. Madison is yellow, freestone, firm, fine textured, and of good quality. Fruits are well colored with bright yellow overlaid by a bright red blush. They are very attractive and sell well. The tree is of average vigor and produces a heavy crop annually. Plant Washington and Jefferson with Madison for full-season coverage of frost-tolerant peaches.

✓ **BLAKE (0144)** A widely planted and most satisfactory peach in nearly all major areas with the exception of the Deep South. Blake is a highly profitable variety to precede Elberta. Its freestone fruits are medium to large and very highly colored, with an attractive red over a good yellow ground color. Flesh is very firm, with considerable red extending out around the pit, and of excellent flavor. Trees are good growers, ranking with Elberta in hardness of bud and tree, and are very productive. Size, good color and time of ripening make Blake the Peach to precede Elberta.

✓ **CRESTHAVEN (0145)** A new variety from Michigan that ripens about one week before Elberta. Tree is self-fruitful, productive, vigorous, and above average in hardness of wood and flower buds. Fruits are uniform medium in size, and nearly round. Skin is moderately thick, tough, golden overlaid with abundant red, and shows little fuzz. Flesh is firm and clear, and resists browning. Cresthaven is very promising for fresh market, freezing, and home canning.

✓ **BABYGOLD #7 (0146)** A large, attractive clingstone peach for the canning trade. Ripening date is about one week before Elberta. Trees are productive and hardy.

✓ **EARLY ELBERTA—Gleason Strain (0147)** A fine commercial peach in areas where markets are not too distant and quality is important. Large, attractively colored, yellow-fleshed, freestone fruits make it one of the most beautiful Elberta type peaches. It has excellent quality and ripens with Belle of Georgia. Trees are hardy, thrifty, and bear consistently. Do not confuse other strains of Early Elberta with this, the original Gleason Strain Early Elberta.

✓ **BELLE OF GEORGIA (0148)** The unquestioned favorite of all white peaches and a household word with the buying public. Fruits are large, bright, attractively covered with red over a creamy white background. The flesh is white, highly flavored, very firm, and aromatic. Trees are very vigorous, hardy, and productive. Belle of Georgia is the standard by which all white peaches are judged.

✓ **POLLY (0149)** A very hardy peach bearing big crops after 20-below-zero winters. It is a freestone of exceptional quality, with a keen peachy taste, juicy and aromatic. The color is a beautiful white overlaid with a rich red blush. Recommended to all growers who wish an exceptional white peach in Elberta season.

✓ **HALE HARRISON (0150)** U. S. Plant Patent No. 814. We offer this fine peach, often called Hale Harrison Brilliant or just Brilliant, under license from the patent owner. It ripens just before Elberta, is yellow fleshed, freestone, nicely colored, nearly fuzzless, and generally large throughout the tree. Blossoms are self-fertile and abundant. The tree is vigorous and a heavy bearer.

Hale Harrison is a good shipper, long keeper, and picks over a long season. Its exceptional quality makes it a favorite for fresh market and processing outlets. Price for Hale Harrison trees is 10¢ more per tree than for regular varieties.

Bob and Dick Kemp select only the very best buds for propagation.

✓ **REDSKIN** (0151) Each year Redskin becomes more popular as the leading peach of the Elberta season. It is a very pretty, large, round freestone with excellent shipping qualities. The yellow flesh is very clear, firm, aromatic, and sweet. Fruits of Redskin are borne in profusion throughout the tree and color well with a deep red blush, even under shady conditions. Processors and fresh market buyers are equally pleased with this fine peach.

Trees of Redskin are vigorous, fast growing, and productive. The wood is hardy, and buds survive low temperatures when trees are in good physical condition. Redskin trees have the ability to size generous crops well under most conditions. Why don't you bring your plantings in this season up-to-date with Redskin?

✓ **DIXIELAND** (0152) This fine new peach is a large freestone and has little pubescence. At maturity, about 50% of the surface is covered with an attractive red over a golden yellow ground. The flesh is yellow, firm, of good texture and flavor. It ripens about with Redskin and Elberta.

Trees are vigorous, productive, and self-fertile, somewhat resistant to bacterial spot and have a chilling requirement of 750 hours.

✓ **ELBERTA** (0153) The world's greatest money-making peach. Elberta trees are hardy, disease resistant, very thrifty, and very productive under most conditions. Fruits are large, freestone, colored a deep golden yellow blushed with red. The skin is tough, and the flesh, while tender and juicy, is of such texture that Elberta is famous for its ability to carry to distant markets. Quality is good, and the slight bitterness around the pit is preferred by many.

✓ **J. H. HALE** (0154) It is one-third to one-half larger than Elberta and more highly colored. The skin is deep crimson, smooth, and almost without fuzz. Flesh is golden yellow, firm, and most delicious. A freestone with unusual keeping qualities. Fruit ripens a few days before or with Elberta, but hangs better. NOTE: J. H. Hale does not have an entirely perfect bloom and needs cross-pollination for best results.

✓ **WHITE HALE—N.J. 63** (0155) A large white-fleshed free-stone of good quality, ripening with J. H. Hale. Tree is vigorous. A fine white-fleshed peach to follow Belle of Georgia.

✓ **JERSEY QUEEN** (0156) A fine new variety, formerly tested as N. J. 216, which ripens with Elberta. It has better color, better quality, and better shelf life than Elberta. It is large and attractive. Trees are vigorous and productive. Flowers are large and showy, with good pollen. Yields have been satisfactory on limited acreage, even after hard winters.

✓ **JEFFERSON** (0157) Jefferson is a new, round, yellow-fleshed freestone ripening about two days after Elberta. Fruits are quite comparable to J. H. Hale, but the color is much brighter. The trees of Jefferson are more vigorous than Hale and produce a heavy set of buds which are self-fertile and quite tolerant to spring frosts. We suggest that you use Jefferson in combination with Washington and Madison for a full season of frost-tolerant peaches in any area where spring frosts present a problem.

✓ **MARGLOW** (0158) An open-pollinated seedling of Redskin introduced by the University of Maryland. Marglow is a beautiful, round, red peach that ripens 3 days after Redskin. Trees are vigorous and productive. Try this fine new variety to extend the Redskin season in your area.

✓ **SHIPPERS LATE RED—Hale Type** (0159) A proven variety to follow Elberta which has class and is a good money-maker. Fruits, which ripen just after Elberta and Hale, are very large, very highly colored, yellow fleshed, freestone, and of exceptional quality. Shippers Late Red is a good shipper, stores well in cold storage, and is extremely productive. Its excellent appearance causes it to bring highest prices. **Hale Type** Shippers Late Red is the best of the many strains of this fine variety. Be sure you are getting the best and plant **GENUINE HALE TYPE SHIPPERS LATE RED** from Bountiful Ridge this year.

✓ **MARLAND** (0160) A new release from Maryland that ripens about 5 to 8 days after Redskin. It is highly colored and has good quality. Size is medium to large. The tree is productive and vigorous. The variety should be tested wherever Rio-Oso-Gem is grown.

JERSEY QUEEN

✓ **MARHIGH** (0161) This fine new peach from the University of Maryland brings Redskin quality and appearance just a little later. We think this new variety will fit into most any orchard plan; especially where late fruit is desirable. Marhigh ripens 5-7 days after Redskin on good vigorous trees. Fruits are good, well-colored and carry well.

✓ **GEMMERS LATE ELBERTA** (0162) An extra large, beautifully colored peach with high quality and fine shipping ability that follows Elberta by about 10 days. Fruits of Gemmers are larger than Elberta, more highly colored, and somewhat more round. Its good, tough skin is nearly covered with a brilliant red color. Flesh is firm and slightly tinged with red around the pit. Trees are vigorous, productive, and long lived. Many growers have used Gemmers Late Elberta as an excellent substitute for Rio-Oso-Gem. Gemmers brings high prices, high yields, and stores well.

✓ **RIO-OSO-GEM** (0163) A widely grown, beautiful, Hale type peach that ripens 7 to 10 days after Elberta. It is large sized, with brilliant red color and light pubescence. The flesh is firm and fine textured, with excellent flavor. Rio-Oso-Gem is best known as a highly profitable fresh market peach, but it is equally good as a canning and freezing variety. Trees are not very vigorous, but set good crops each year.

✓ **SO GOOD** (0164) A new yellow freestone from Maryland ripening about with Rio-Oso-Gem. Fruits are large, highly colored, and most nearly resemble Redskin. It crops annually, with good yields. Trees are vigorous and healthy, more upright than Redskin. So Good should have a place in your plantings.

✓ **MARQUEEN** (0166) Just introduced by the University of Maryland, Marqueen is certain to become popular almost overnight. It ripens 2 to 5 days after So Good and just a bit later than Rio-Oso-Gem. The fruits are well colored, of good size and appearance, and make a beautiful pack. We think Marqueen is just the peach to extend your season for high quality fruit.

MARSUN PEACH

✓ **KENLATE** (0167) A new late-ripening budsport of the old Elberta variety found by Dr. John H. Kendall of Clinton, North Carolina. Size, color, and quality of Kenlate are excellent. The tree is vigorous and productive, bearing large crops of fruit at an early age. Kenlate ripens two weeks or more after its parent and should be tried where a need for a good late peach in this season persists. Please add 10c per tree to regular peach prices for this new variety.

✓ **LIZZIE** (0168) Lizzie is a distinct Elberta type which has size, color, firmness, and high quality. It is a freestone with fine-textured, yellow flesh. It ripens 12 to 16 days after Elberta, with handsome red color over a deep yellow ground color. Fruits are good for shipping, local markets, and processing. Trees are vigorous, hardy, heavy and annual bearers.

✓ **MONROE** (0169) A new late season yellow freestone from Virginia. Monroe ripens about 6 days after Rio-Oso-Gem. The fruits are above average in size, have bright red color and are very firm. The flesh has good texture, and the quality and flavor are superior to Rio-Oso-Gem. Trees of Monroe produce only a moderate set of buds that have shown above average tolerance to spring frost. However, the trees are reliable producers of large, handsome fruits.

✓ **AUTUMN—N.J. 145** (0170) A large, yellow freestone that ripens just after Lizzie. Fruit colors a good yellow with a fine red blush on one cheek. The tree is very vigorous and should be planted on well-drained peach soil. Autumn is just the peach for the grower who wishes good size, high quality, very late fruit for roadstand or nearby markets. In recent years, Autumn has been stored in cold storage well into the fall.

✓ **MARSUN** (0171) This new peach variety was introduced by the men from Maryland because of its very late maturing season. Marsun is a highly colored peach that ripens 28 to 30 days after Redskin. It is best suited for the Maryland area and points south. We do think it worthy of trial in other late peach producing areas.

MARQUEEN PEACH

ALWAYS ORDER BY CATALOG NUMBER AND VARIETY NAME FOR FASTER SERVICE

"PRODUCTS OF NORTH CAROLINA"

New Bacterial Spot Resistant Varieties

(Listed in order of ripening)

WHYNOT (0172) A small yellow fleshed seedling or Erly-Red-Fre that ripens 3-5 days before Marcus. Fruits are covered with a red blush. Flesh is melting and good. A clingstone until soft ripe. Bacterial spot is never a problem.

PEKIN (0173) A medium sized, rather round, attractively colored variety ripening just before Redhaven. Fruits are firm, flavorful, and freestone when soft ripe. Resistance to bacterial spot is high or better than Redhaven.

NORMAN (0174) Heavy crops of large, round, and smooth fruits are ripened 3-5 days before Ranger. A deep red blush covers a golden yellow ground color. Flesh is firm, melting and good flavored. Bacterial spot resistance is better than Redhaven.

TROY (0175) Ripens with Ranger. Fruits are well covered with a red blush over a yellow ground. Size is good, round fruits are freestone and hold well after Harvest. Moderately resistant to bacterial spot.

BISCOE (0176) A large, round, attractive variety ripening with Redskin. Fruits are firm, well colored, fine textured, and with pleasing flavor. Fully freestone. Highly resistant to bacterial spot.

EMERY (0177) Fruits are medium to large, round and smooth and ripen 5-7 days after Elberta. Color is good, flesh is firm and fruits keep well after harvest. Fully freestone and only moderately resistant to bacterial spot.

DEAR SIRs:

After the wonderful way you handled my last order, I just had to order something more. Thank you again for your fine service.

Michael Cernan

NOVELRED (2010)

Half Nectarine—Half Peach

Novelred is a brand-new discovery that is neither all peach nor all nectarine. Both fuzzy and smooth fruits are produced on the same tree at the same time. Many times you will find that one fruit is partly smooth and partly fuzzy. The quality of both types of fruit is excellent. The fuzz on the ordinary peach-like fruits is short and not objectionable.

Fruits of Novelred are very large, very red, and have extra fine flavor. Size runs to 3½ inches in many cases. Clusters will make 2½ inches under most conditions. The excellent color of Novelred is generally a brilliant red which covers nearly all of the fruit. Even the poorer colored ones are blushed with a deep red which makes them more than appealing to the most critical eye. The smooth fruits are most always the best colored, however. The flesh of Novelred is white, streaked with carmine, and very juicy. Both the smooth and fuzzy fruits have excellent flavor, being a bit more tart and winey than an ordinary peach.

Novelred is a full freestone seedling of Erly-Red-Fre which it most nearly resembles. Its ripening season is about that of its parent, and at a time when highly flavored peaches or nectarines are not available. We know Novelred will not be good for large commercial planting, but we feel that it is a fine addition to the home gardener's or small grower's variety list. Supply limited. . . . Price: 50¢ more per plant than for regular peach, according to size and quantity.

NECTARINES

FLAVORFUL - BEAUTIFUL - POPULAR

✓ **LAFAYETTE (2005)** The largest of all the new Virginia selections. Lafayette has the best skin color and finish, too. Even though the flesh is white, we think this fine new variety will be a welcome addition to every planting. Fruits ripen with Lexington, seem resistant to brown rot, and good crops are borne annually.

✓ **REDCHIEF (2006)** One of our best white-fleshed varieties. Fruits are of good size, highly colored, freestone, and with a very pleasing flavor. Trees are thrifty and productive, with a marked resistance to brown rot. Redchief ripens about 13 days before Elberta and is moderately tolerant of spring frost.

✓ **GARDEN STATE (2007)** A large, firm, freestone, yellow-fleshed nectarine that ripens with Hale Haven and Redchief, 12 to 15 days before Elberta. An orange-yellow undercolor is overspread with red to give it a fine appearance. Trees are vigorous and productive. One of our finest nectarine varieties.

✓ **CAVALIER (2008)** More highly colored than Redchief. It has good size, fine yellow flesh with high quality, marked resistance to brown rot, and is a freestone. Trees are vigorous and productive, setting abundant quantities of fruit buds that are quite tolerant of spring frost. Cavalier ripens about 8 days before Elberta.

Premium Varieties

Add 75c per tree for Francesco; add 50c per tree for Novelred.

Varieties listed in order of ripening

✓ **POCAHONTAS (2001)** A good new yellow-fleshed variety from Virginia that is medium large in size. The skin is highly colored, and the quality is good. A semi-freestone, Pocahontas ripens 19 days before Lexington. The trees are vigorous, productive, escape damage from brown rot and frost during blossoming season, and have large, showy bloom.

✓ **CHEROKEE (2002)** A highly colored new variety from Virginia that ripens about 30 days before Elberta. Fruits are yellow fleshed, semi-freestone and above average in quality. Trees are productive, medium vigorous, and produce large showy flowers. Cherokee has above average tolerance to brown rot and spring frost.

✓ **REDBUD (2003)** A white-fleshed, average-sized freestone ripening about 27 days before Elberta. A good bright red, attractive, smooth skin covers the fruits which are above average in firmness, medium in texture, and of good quality. The trees are of average vigor and produce heavy sets of buds. They are highly resistant to brown rot when a standard peach spray schedule is followed. Buds are more tolerant to late frost than Redchief, but slightly less than those of Cavalier.

✓ **LEXINGTON (2004)** A yellow-fleshed variety ripening about 17 days before Elberta, with average-sized, freestone fruits 2 inches or more in diameter. The skin is a deep yellow overlaid with red, giving an attractive appearance. The flesh is medium textured and of good flavor. Lexington is resistant to brown rot when regular peach spray is used. The trees are vigorous and set a large amount of fruit buds which are relatively hardy.

FRANCESCO (2009)

Plant Patent No. 2839

A very fine new nectarine found by Anthony and Nunzio Curcio of Hammonont, New Jersey. Francesco produces extremely large freestone fruits of high quality. The fruits are more than half covered with a beautiful carmine-red which is laid over a good golden yellow ground color. Ripening period is from August 25th to about September 5th or in the Blake-Redskin peach season in the Hammonont area.

The Curcio's were first attracted to this new fruit by its excellent size. Mature fruits of Francesco will measure 2½ or more inches when well grown. Color is such that Francesco can compete very favorably with western nectarines. The fruits are resistant to disease and insect pests as grown on second and third generation trees. The Curcio Brothers have found a good peach spray schedule completely satisfactory for this new nectarine. Added benefits of Francesco are fine flavor and excellent keeping and shipping quality.

Trees of Francesco are thrifty and productive, medium large in growth, upright and round-topped in habit. They are hardy and bear annually. Flowers and buds are hardy and open medium early. Cross-pollination is not required.

We suggest you place your orders now to reserve your needs. You may be assured this is an excellent nectarine that can be successfully grown under eastern conditions. It is truly a fine fruit for the commercial and home grower. **Price of Francesco will be 75c more per tree than regular Nectarines.**

Varieties listed in order of ripening

BRUCE (2501) One of the best Oriental plums for southern planting. It ripens very early, averages good size, is very firm and has fine quality for such an early variety. If picked just as the yellow background appears, it will ship well and color a pretty, bright red in three to four days. Bruce is very productive, but requires pollination.

METHLEY (2502) A fine variety with excellent quality and handsome appearance. Fruits are medium to large in size, reddish purple in color with red flesh. They are juicy, sweet, and of distinctive flavor. Trees are very vigorous, upright in growth. Buds are hardy, abundant, and self-fertile.

SHIRO (2503) A very early Oriental plum with beautiful yellow color and good flavor when allowed to mature properly. Fruits are of medium size, and suitable for cooking, canning, and dessert use. Requires pollination.

BURBANK (2507) A large, bright reddish purple plum that is meaty and quite firm. It is hardy and prolific, and best fruits are obtained when well thinned. Trees are low growing, flat topped, and somewhat drooping. Burbank is valuable for canning and fresh market use. An Oriental variety that does much better with pollina-

✓ OZARK PREMIER (2508) A very large, firm, red Oriental plum that is gaining wide grower approval. Fruits have yellow flesh that is juicy, tart, and clingy but with good flavor. Trees are hardy, productive, and vigorous. Self-fertile.

✓ BRADSHAW (2509) An early European plum with good size, fine dark violet-red color, good shipping and keeping ability. The flesh is yellowish green and has excellent flavor. Trees are hardy and excellent growers, producing heavy annual crops. Not self-fertile.

✓ SANTA ROSA (2510) One of our best Oriental plums. Fruits are large, conical, uniform, juicy, flavorful, and colored purplish crimson with a pale bloom. Trees are large, vigorous, and productive. Blossoms are self-fertile, but produce larger crops when planted with another variety.

✓ SATSUMA (2511) One of our best home canning and preserve plums. Fruits are large, almost round, with deep dark red skin. Flesh is purplish red, juicy, sweet, firm, and has fine flavor. A semi-freestone Oriental variety that needs pollination. Plant with Santa Rosa for best results.

✓ FELLENBURG (2512) An old European variety widely known for dessert, market, and drying usage. Fruits are long, large, oval, purple covered with a thick bloom. Flesh is firm, sweet, juicy, and delicious. A freestone. Trees make moderate growth and are hardy. Self-fertile. Also known as Italian or German Prune.

✓ YELLOW EGG (2513) A late European variety that produces large, golden yellow fruits. Fruits have heavy skin and yellow flesh that is juicy, mild, and fine in quality. A freestone adapted to home, market, or culinary use. Trees are vigorous, round topped, hardy and very productive. Self-fertile.

✓ **STANLEY (2514)** The most popular of all prune plums, it is excellent for home use and commercial planting. Fruits are large, of fine quality, and colored deep purplish blue. The flesh is greenish yellow, juicy, tender, firm, and sweet. Trees are vigorous, hardy, bear early, and produce large annual crops. Freestones. Self-fertile.

✓ **SHROPSHIRE (2515)** One of our most esteemed preserving fruits. Damson plums are borne in profusion by good, vigorous trees. Fruits are oval, of medium size, and dark purple in color. A European variety that is self-fruitful.

METHLEY PLUM

APRICOTS

✓ **STELLA (2520)** A hardy Russian type apricot that is very cold resistant. Produces good crops of fruit where other varieties freeze out. The fruit is medium size, golden yellow in color, and delicious in quality. A freestone. Recommended for all sections where peaches can be grown.

✓ **EARLY GOLDEN (2521)** A good variety. Very large, deep golden yellow, fine in quality.

✓ **SUNGOLD (2522)** A sister seedling of Moongold that ripens later. Fruit gold with orange blush, medium size, very high quality, freestone, and hangs well until ripe. Tree is medium sized, rather upright, exceptionally winter-hardy, very productive, self-unfruitful but pollinated by Moongold. For home use.

✓ **MOONGOLD (2525)** A very hardy new apricot for northern areas. Fruits are medium in size, orange-yellow, freestone, and of good quality. Ripens earlier than Sungold; self-unfruitful but pollinated by Sungold. Trees medium sized, rather spreading, vigorous, and do well in cold climates. For home gardens.

✓ **SUPERB (2523)** Rated by many as the best. The tree is large, very thrifty and hardy, and is extremely productive. Very good quality. Fruit is beautiful yellow with slight blush; flesh firm and solid.

✓ **MOORPARK (2524)** One of the largest. Orange-yellow with numerous specks and dots; flesh yellow, sweet, juicy, and rich. August.

✓ **PINEAPPLE (2532)** An excellent kind for eating or for cooking. The fruits are large, smooth, and colored a pretty golden yellow. Flesh is white, with a pineapple-like flavor. Tree is small and attractive. Ripens late in the season.

QUINCE TREES

Dwarf Size — Luscious Fruit

	Each	2 for
4 to 5 ft.....	\$3.95	\$7.50
3 to 4 ft.....	3.25	6.00
2 to 3 ft.....	2.95	5.50

✓ **ORANGE (2530)** An outstanding fruit for jam and jelly. Fruits are borne on small, dwarf trees and are profitable for fruit growers, farmers, and home gardeners. Large crops of roundish, bright yellow, very large fruits of fine quality are borne annually. Trees take little room and are easy to grow.

✓ **CHAMPION (2531)** Fruits are very large, handsome, and lighter in color than Orange. Trees bear abundantly while young. Flesh of Champion is tender, without hard spots and cores. Flavor is very delicate and delicious for any purpose.

Write for special prices if you are interested in large quantities. We will give you the advantage of any market changes.

Note: Sweet Cherries bear heavier and more regular crops where properly cross-pollinated, and two or more varieties should be planted together.

Again note that Napoleon, Bing, Lambert, and Emperor Francis are incompatible; a third variety should be planted with them.

Sour Cherries are generally self-fruitful and will cross-pollinate Sweet Cherries to a greater or lesser degree, depending on seasonal bloom period variations.

Varieties listed in order of ripening

EARLY RIVERS (3502) This fine cherry is highly regarded by cherry growers in eastern New York. Ripens a few days later than Seneca and 10 days ahead of Black Tartarian. It is larger and firmer in flesh than Tartarian. Crimson-black in color and excellent quality for dessert. Early.

BLACK TARTARIAN (3503) Very large; bright purplish black; tender, juicy, very rich. Tree a remarkable vigorous and erect grower, and is an immense bearer. Early.

VERNON (3505) The fruit is large, firm fleshed, black, and ripens just before Bing. The tree is vigorous and productive.

Sunscauld is a particular problem with young trees during the winter months. Protect your trees the first winter by wrapping two layers of household aluminum foil around the trunks and larger branches. This will also guard against mouse and rabbit damage.

BING (3506) This valuable black cherry succeeds everywhere. Flesh very solid; flavor of the highest quality. A fine shipping and market variety. Midseason.

NAPOLEON BIGARREAU (Royal Ann). (3507) A beautiful cherry of large size, pale yellow with bright red cheeks; flesh firm, juicy, and sweet. One of the best for market. Midseason.

EMPEROR FRANCIS (3508) Large, high quality cherry of the Napoleon type. Ripens just before Napoleon and is less subject to cracking. Promises to be one of the best main-crop sweet cherries of the Napoleon type. Midseason.

BLACK RUSSIAN (3509) One of our finest new, hardy sweet cherry varieties. Trees are vigorous, very hardy, and highly productive. Crops are seldom affected by low winter temperatures or spring frosts. Fruits are medium in size, do not crack, and show little tendency to brown rot before picking. Cherries are almost black in color, freestone, and very flavorful. Ripens just before Schmidt.

SCHMIDT'S BIGARREAU (3510) This fruit is very large size, with a fine rich flavor. Fruit grows in clusters. Is an excellent shipper. Tree is vigorous and one of the hardiest of all sweet cherries. Midseason.

HEDELFINGEN (3512) Ripens just ahead of Windsor and Lambert. Its performance in New York, Canada and Europe justifies its being recommended as a large, firm-fleshed, high quality, late black cherry of the Lambert type. The fruit has the valuable attribute of being more resistant to cracking than most cherries.

LAMBERT (3513) One of the largest of all cherries. It is purple-red, firm and rich. Every year sees an enormous crop. The tree not only grows well, but is very resistant to insect and fungus attacks. Midseason.

WINDSOR (3514) Tree upright, vigorous and a rapid grower. Fruit almost black, very firm and juicy; flesh pinkish and sometimes streaked. Quality very good; a productive bearer. A leading commercial variety, used widely for pollination purposes. Midseason.

BOUNTIFUL STRAIN IMPROVED**MONTMORENCY (3520)**

(DAYTON STRAIN)

World's Best Pie Cherry

Our Dayton strain was found in the orchards of Clyde S. Mumma and was selected for its extra large size and the good vigor of the tree. Thousands of trees have been planted since this fine strain was first seen many years ago. Self-fruited.

EARLY RICHMOND (3521) One of the most valuable and popular cherries, unsurpassed for cooking purposes. It is the good old variety that yields such marvelous crops in gardens. The most hardy of all varieties, uninjured by the coldest winters.

HANSEN'S BUSH CHERRY (3532)

Selected Hansen Bush Cherry has fruits resembling Montmorency only not as large. The fruits are edible and make fine pies. A True Dwarf Plant seldom attains a height of more than 3 ft. Blooms early spring, giving beauty as a shrub plant. Branches are almost covered with attractive red cherries of good size.

Hardy—Easy to Grow**18-24 inch branched, bearing-size plants:**

ORIENTAL PERSIMMONS**BEAUTIFUL—DELICIOUS**

ATOMA (4501) Tree of this new hardy type is strong, vigorous in growth and a good bearer. The fruit is large, oblate with well defined quarter marks, skin orange-yellow changing to dark orange with a delicate bloom and waxy appearance; light clear flesh when ripe. Loses its astringency when ripe and of high quality. Hangs well.

FUYUAKI (4502) Fruit of this variety is never astringent. It is edible while still hard and may be peeled and eaten like an apple. It keeps well and quality is of the best. Fruits are medium in size, rather flattened, beautiful deep red color, and a very prolific bearer.

TAMOPAN (4503) A very large persimmon—often 3 to 5 inches across—that is oblate and very flat, with marked depression at the stem. The skin is reddish orange, thick and tough. The flesh is light orange and astringent until ripe. Ripens late, but is rather hardy.

EUREKA (4504) A hardy variety with a most delicious flavor. Sometimes seedless. Big red-orange fruits literally cover the tree and hang until soft and ripe. Slick, dark green foliage adds to the ornamental value of this type grafted persimmon.

TANE-NASHI (4505) Large to very large, conical in shape. Light yellow changing to red as the fruit ripens. Flesh is astringent until fully ripe when it acquires a delightful flavor that is characteristic of the fruit.

**Prices For All Persimmons:**

3 to 4 foot, \$5.25 each; 3 for \$15.00

2 to 3 foot, \$4.50 each; 3 for \$13.00

Oriental persimmons are one of the finest ornamental plants we know. They have beautiful, waxy green foliage through the summer which changes to rich, golden yellow streaked with red in fall. The trees are rather slow growers, which makes them popular for small homesites. Tree characteristics of Oriental persimmons are outstanding enough to merit space in any planting. Delicious fruit is an added bonus.

The Oriental persimmon is adapted to most regions in the South and can be raised successfully as far north as Pennsylvania. The trees are vigorous and bear when young. We ask that you give your persimmon trees excellent care upon arrival. They break dormancy more slowly than most other trees, but will be entirely satisfactory if kept well watered.

Varieties listed in order of ripening

CLAPP'S FAVORITE (3001) A large, fine pear that resembles Bartlett except that it is much longer. Fruits are colored a pale lemon-yellow with brown dots. They have fine texture; are melting, buttery, juicy, and delicately flavored. Trees are hardy and productive.

MOONGLOW (3002) A large, early-ripening pear which is promising for processing and market use. It is picking mature from 10 days to two weeks ahead of Bartlett and will ripen to prime eating quality 15 to 18 days later. Fruits are attractive, nearly free of grit cells, rather soft and moderately juicy. Flavor is rated as good.

Trees of Moonglow are vigorous, very upright, heavily spurred, and bear early. Abundant pollen is present. Moonglow is very resistant to fire blight.

FLEMISH BEAUTY (3003) A large, juicy, melting and rich variety that doubles as an excellent pollinator. Trees are hardy, strong growers, and good bearers; they prefer sunny locations.

BARTLETT (3004) The standard by which all other pears are judged. It has large size, golden yellow color, and tremendous quality. It is equally popular on the fresh market and with the processors. Fruits are buttery, very juicy, and highly flavored. Trees are strong growers, bear early and abundantly. Bartlett is moderately susceptible to fire blight and should be planted where this disease is not too severe.

IMPROVED BARTLETT (3005) A "local find" that is similar in growth habit and fruit to regular Bartlett. It bears young and heavily, with well-shaped and flavorful fruits. Most important is that this fine variety has had pear blight only once in all the years we have grown it. Then, the blight was purposely induced by overfeeding, and the cankers did not go beyond the soft new wood. Our tree recovered nicely and is continuing to produce fine crops. We think this is a fine new variety and want you to try it, but we cannot guarantee it blight-proof because growing conditions, tree vigor, and planting site could alter its fine record.

DEVOE (3007) A real good variety that is popular and profitable, especially in eastern pear-growing areas. Devoe most nearly resembles Beurre Bosc in shape. It has a rich appearance, large size, and delicious flavor. Devoe brings highest prices on fresh markets everywhere and is excellent canned.

Fruits are borne in profusion at an early age on very vigorous and strong trees. A golden yellow color, highlighted with a pretty red cheek, covers the long fruits as harvest time approaches. The flesh is firm, white, lacking in grit cells, juicy and sweet. When picked at proper stage of maturity, Devoe will keep well in cold storage until January and later. Proper picking time is about a week later than Bartlett.

The tree is upright in habit; wood is whippy and bears a good fruit load without breakage. It is very resistant to pear psylla.

Devoe is a good **Blight-Resistant** variety. However, **Blight Resistance** in no way implies that the variety will be completely free of fire blight, regardless of the cultural practices used. Devoe is a fine, vigorous grower and needs little fertilization, no constant cultivation or extensive-pruning for good results.

MAGNESS (3008) A very blight-resistant, new variety that is picking mature about a week later than Bartlett. The fruit is lightly covered with russet, medium in size, and generally oval in shape. The flesh is soft, very juicy, almost free of grit cells, sweet, highly perfumed, and aromatic. The skin is tough and resists insect injury. Magness can be held up to three months in cold storage and ripen with good quality.

Trees are very vigorous, spreading, and sometimes thorny. They begin bearing at about six years. Magness is entirely pollen-sterile and must be pollinated with some other variety for good set. Blight resistance is extremely high.

1 Year Pear Tree "Bountifully Grown"

ANJOU—Beurre d'Anjou (3010) A large, fine pear that is buttery and melting, with a sprightly flavor. The tree is a fine grower, very productive, and an early bearer; one of our best varieties for the home and orchard trade. Anjou is partially resistant to fire blight.

BEURRE BOSC (3011) A large pear colored a dark, rich yellow overspread with a cinnamon russet. Flesh is white, rich, tender, very juicy, and with pleasing aroma. Quality is very good, Seckel alone surpassing it as a dessert fruit. Trees are slow growers and do not bear at an early age, but are large and most productive at maturity. They are blight susceptible.

DUCHESS D'ANGOULEME (3012) A very large, greenish yellow pear that is the favorite of many home gardeners. Trees grow equally well on standard or dwarf roots, making beautifully symmetrical trees that bear early and annual crops of fine fruits. Fruits are buttery, melting, and of fine flavor.

WORDEN SECKEL (3013) A Seckel type pear that is larger and more handsome than Seckel. Fruits are smooth, glossy, uniform, with a good blushed cheek on a handsome yellow background. They keep longer than Seckel. A hardy tree that bears when young.

SECKEL (3014) A small, rich yellowish brown pear that is one of the best flavored ones known. Seckel is very productive, somewhat blight resistant, and easy to grow. It is the all-time favorite for home planting.

ORIENT (3015) A good blight-resistant variety for southern growers. The trees are large, vigorous, productive, and require little pruning. Fruit is firm, juicy, slightly sweet, and nearly round. Its creamy white flesh has good texture and cans well.

KIEFFER (3016) Grown in all sections of the United States and Canada, the tree is practically immune to blight, very thrifty in growth, and bears consistently heavy crops. Fruits are large, colored golden yellow, juicy, often gritty, and of poor quality for fresh use. They are quite good for culinary purposes, however, and keep well into the winter.

HELPFUL HINT: Most pear varieties are self-unfruitful and should be interplanted with other varieties. Seckel and Bartlett will not cross-pollinate each other and where these two varieties are being planted, another variety should be added. Duchesse and Flemish Beauty are the best pollinating varieties.

FIG TREES

HEALTHY—EASY TO GROW—DELICIOUS

EVERBEARING TYPE (6101) Characteristics similar to the Brown Turkey, otherwise it starts to bear early in the season and continues to bear fruit into late fall. This variety is very attractive as to bush and is used much for ornamental purposes.

CELESTE (6102) Most widely planted of all figs in the southeastern fig areas. It is hardy and can be grown where less hardy varieties fail. Fruit is medium in size, skin violet, flesh white to rose color, firm, juicy, sweet and of excellent quality.

BROWN TURKEY (6103) Very hardy, dwarfish and prolific. Fruit medium size to large, pear shaped, skin copper brown, flesh white shading to pink, quality good.

MAGNOLIA FIG (6104) One of the hardiest species, doing well where the winters are not too severe. Fruit very large and of rich straw color. Fruit begins to ripen the last of June.

CRAB APPLE

HYSLUP (1070) Season September to October; tree vigorous, very hardy. Fruit medium yellow ground with heavy shadings of deep crimson and splashes of maroon with heavy blue bloom. Flesh fine, firm, yellow, astringent. Bears abundantly in clusters, which makes tree exceedingly ornamental.

DOLGO (1071) A handsome red crab apple of medium size. The fruit jellies easily and makes rich ruby-red jelly. Tree hardy, vigorous, productive, medium size and especially adapted to ornamental planting.

✓ **YELLOW TRANSPARENT (1001)** Holds a long record as our most widely planted early commercial apple. Tree is upright, hardy, early bearer. Good size; skin clear white to pale yellow in color. Flavor very good. An excellent cooking apple known to the housewife everywhere. Ripens early July.

✓ **LODI—Big Transparent (1002)** One of our very best early apples, it has the same quality and flavor as Yellow Transparent but it is much larger and firmer. Fruits ship well and do not show bruising. Ripening date is a few days later than for Transparent, but Lodi can be picked earlier because of good size. Trees are spreading, vigorous, and productive. Needs pollination.

✓ **QUINTE (1003)** A promising new variety from Canada for the summer market. Fruit is medium sized, round to slightly conic, of good flavor, and an excellent shipper. Skin is an attractive yellow, heavily washed in red. The tree is hardy and bears good annual crops. Ripens early, just after Lodi, and requires several pickings.

✓ **WILLIAMS' EARLY RED (1004)** Among the earliest to ripen and the largest of all early apples, a better name for it is "Big Red Apple." Flesh is white, juicy and slightly tart, tender and crisp. A very good one, like Transparent. Bears heavily on young trees.

✓ **TANGIER (1005)** This is another of the recent varieties named after our local bodies of water. Tangier is an excellent early ripening kind that greatly resembles Delicious. It is well colored, sizes well, has fair dessert quality, and ships well to intermediate markets. The tree grows strongly and produces large annual crops. We think Tangier may be just the apple you need to start the summer Delicious sales.

✓ **WELLINGTON (1006)** An attractive red-striped apple ripening just after Lodi. Wellington matures all of its fruit at one time and needs only one picking. An excellent early commercial for fresh and processor markets. Trees available on semi-dwarf rootstock only.

CHESAPEAKE APPLE

EARLY MCINTOSH (1007) A McIntosh hybrid, being almost red in color, very crisp. A thrifty grower and a regular bearer. Your opportunity to have the McIntosh type as a very early apple. Cash in on the popularity of the McIntosh by growing Early McIntosh for your markets.

MOLLY'S DELICIOUS (1008) An origination of The New Jersey Apple Institute that is much like a very early Delicious. The fruits are very "typey" and seem to hold up well under commercial conditions. Molly's Delicious may be just the summer apple you have been looking for. Tests to date show that it is well adapted to the southern areas. Try a few trees to see how it performs in your area.

CAULEY (1009) An extra large apple suited for growing in the Deep South. Fruits mature about the middle of August in Mississippi and are greenish yellow with a slight blush of pink. Since Cauley is best used for culinary purposes, it can be picked 4 to 6 weeks ahead of actual maturity. Trees of Cauley are long lived, productive, and highly resistant to fire blight. Blossoms do need pollination and Yellow Delicious is suggested. Trees available on semi-dwarf rootstock only.

SUMMER CHAMPION (1010) A bright red apple ripening in midsummer, with good size and fair quality. The trees bear early and produce heavy crops. We feel this fine-looking apple should have a place in most plantings of summer apples. It is good for local and distant markets.

JULYRED (1012) A fine new summer apple from New Jersey that ripens a week to ten days after the first picking of Starr. Fruits are covered with an attractive red color, good to eat, and above medium in size. Julyred is attractive, firmer, and has better shelf life than most other summer apples. Won't you try them?

TYDEMAN'S RED (1013) A new late summer apple of McIntosh type. Ripens just after Early McIntosh. Fruits are large, red; similar to McIntosh but much firmer.

RED GRAVENSTEIN (1014) This favorite of many years as a summer apple of fine quality and shipping ability is now offered in a Red Strain. Large, well colored, with slightly yellow flesh of fine quality. Tree is vigorous and productive. Ripens somewhat irregularly and should be picked several times.

BEACON (1015) A highly colored, early apple with excellent eating and shipping qualities. Ripens just before Wealthy and after Williams' Early Red. The tree is vigorous, healthy, and a heavy producer. Fruit hangs well and can be picked over a long period of time to get the best size and color. Averages $2\frac{1}{2}$ -inch fruit with normal crop.

MILTON (1016) Typical McIntosh, coloring full red; very good quality, about equal to McIntosh, being same texture apple. Tree hardy and vigorous. Ripens three to four weeks before McIntosh or just before Wealthy.

WEALTHY (1017) This beautiful, moderate sized, brilliant red apple is of fine quality—one of the best of its season. It is a relatively good keeper, and owing to the hardness of the tree, its adaptability to cold climates, and early bearing habits, it can be profitable as a filler.

SUMMER RAMBO (1018) Large, flat, streaked red and yellow, very tender, juicy and fine flavored. Tree is a very vigorous, semi-spreading grower, hardy and productive.

SKYSPUR (1019) A spur-type mutation of the Famous Skyline Supreme Red Delicious introduced by us several years ago. Fruits of SKYSPUR are large, have good Delicious shape, and are completely covered with the same good red blush that is present on Skyline Supreme. Season of ripening is the same as its parent, too.

Trees of SKYSPUR are normally semi-dwarf in size. The opening, spreading habit of growth allows all the fruit to color well. Fruits are borne on long spurs throughout the tree. The fruits hang free and are less subject to spur injury than on most other spur-type varieties.

SKYSPUR sets a heavy crop at an early age. No need to waste precious time and money on slower bearing strains of Delicious. SKYSPUR does need pollination for best results. We suggest "NUGGET," our new spur-type Yellow Delicious. See Special Price List for one-year trees on standard rootstocks only.

APPLE SEEDLINGS (1099)

Save Those Valuable Damaged Producing Trees by Bridge Grafting and Low Inarch Work

This is the common apple seedling that has been used in propagating apple trees for generations. We can supply these two-year-old, strong roots and one-year tops in the following sizes and prices (supply limited):

	10-50 each	50-200 each	200 or more each
3-4'	\$0.50	\$0.45	\$0.40
2-3'45	.40	.35
18-24"40	.35	.30

SKYLINE SUPREME RED DELICIOUS (1020)

Early Coloring - Early Ripening

✓ **SKYLINE SUPREME** is a true sport Starking that is particularly outstanding because of its early coloring and early ripening habits. Fruits of Skyline Supreme reach full color and maturity several weeks earlier than Richared and Starking, and many days earlier than most recently introduced early coloring types. They color equally well in all areas of the tree. The well colored, completely blush red fruits are ready to pick at the same time as the red sports of McIntosh.

Skyline Supreme exhibits a strong habit toward the sheep-nosed condition prevalent among western grown Delicious. Trees are vigorous, bear young, and set large crops of large, highly colored fruits. Blossoms are similar to other types of Red Delicious and appear at the same time. Pollination is needed for best results.

Trees of Skyline Supreme are normally regular size. See pages 28 and 29 for controlled size trees.

✓ **IMP. ALL RED MCINTOSH (1021)** Our own special selected strain of the famous McIntosh apple. Known in some areas as Imperial McIntosh, this fine apple brings the grower excellent blush-red color, large size, and consistent crops. This is the finest red strain of McIntosh we have ever seen.

✓ **LOBO (1022)** About same season as McIntosh, with a larger apple that colors a more full red than regular McIntosh. Extra good quality. Tree equal to McIntosh. Comes highly recommended to replace the regular McIntosh for Middle Atlantic and southern growers.

✓ **CORTLAND (1023)** An improved McIntosh type. The fruits of the two varieties are similar but those of Cortland are more oblate, average larger, and are more uniform in size; they have more color and the red is lighter and brighter and the striping and splashes are laid on differently. The taste of Cortland can hardly be distinguished from that of McIntosh; the flesh is firmer but just as juicy. The apples do not drop so readily and ship better.

✓ **IMP. ALL RED JONATHAN (1024)** This is a special bud-selected strain of the famous Jonathan apple. We have tested it in every section of the country, in trial plots and commercial orchards, for more than twenty years and have found it superior in most all cases. Highly colored Jonathan apples bring the fancy prices. Use this fine, proven red strain of Jonathan for replanting and new planting work. We are sure it will satisfy your needs.

✓ **GRIMES GOLDEN (1025)** An apple of the highest quality. It is one of the fancy dessert apples and ranks with Delicious and Jonathan on the market. Medium to large, bright yellow; flesh fine grained, juicy, with a very pleasing spicy flavor. The tree is hardy, grows upright and is quite disease resistant. Highly recommended and widely planted to pollinate self-sterile varieties.

✓ **IDARED (1026)** A cross between Wagner and Jonathan. Its season is with or a little later than Jonathan. Fruits are medium to large. Stems medium long, slender; cavity broad, deep; calyx small, basin shallow. Strikingly beautiful bright red color. Skin smooth, medium thick, waxy; dots sparse, inconspicuous; rich yellow under-color. Fruits hold form as well as Rome when baking. Creamy white, smooth-textured flesh. Tree form resembles Jonathan, more upright, spreading, seems rather resistant to blight. A regular bearer.

✓ **SPARTAN (1027)** A very attractive McIntosh type ripening about a week later than McIntosh. Flesh is firm and dessert quality is good. Storage life is weeks longer than McIntosh. We recommend it for trial, where a McIntosh type that can be picked later and stored longer is desired. Trees available on semi-dwarf rootstock only.

✓ **TWENTY OUNCE (1028)** Fruit exceptionally large, juicy and crisp, sub-acid; color green, with slight blush and red stripe. Tree thrifty and very productive, generally recognized as our best summer baking apple.

✓ **OPALESCE (1029)** Very large, brilliant dark red all over. Tree bears when young; very prolific. Average quality. Its size and beauty recommend it for planting in central and northern areas.

✓ **SHENANDOAH-VPI 2 (1057)** This new variety is a seedling of Winesap crossed with opalescent which ripens about 10 days before Delicious. The fruits have color resembling Winesap, are smooth and symmetrical. The flesh is firm, crisp, juicy, and with good flavor. Primarily a processing apple, it is also acceptable for fresh use. Trees are vigorous, produce many spurs, and size their crop well.

✓ **PACIFIC GOLD (1030)** Pacific Gold originated as a chance seedling in southwest Oregon and was introduced in the late 40's by J. E. Miller of California. The tree is moderate in size, with well-spaced, strong, wide-angled limbs. It bears when young and yields heavy crops annually. The fruit of Pacific Gold is large, with crisp, tender flesh, quite sweet, and of fine dessert quality. The skin is yellow, looking much like Yellow Delicious and Mutsu. The season is late fall or early winter. Pacific Gold keeps well in storage and should be tried in areas where russetting is a problem with Yellow Delicious.

DEAR SIR:

The replacement trees shipped on Dec. 3 arrived Dec. 4 in excellent condition. Thank you for your excellent service. Every tree I have ordered from you has had a healthy, well formed top and the best root system I have ever received from any nursery. Thanks again.

Douglas Hampton
North Carolina

**ALWAYS ORDER BY CATALOG NUMBER
AND VARIETY NAME**

NORTHWESTERN GREENING (1031) A fine, large, green cooking apple that is being demanded by growers and processors once again. Trees are vigorous and quite hardy. The fruits are of good flavor, very smooth and attractive. This fine apple matures just before Yellow Delicious but can be picked over a long period of time with good results.

YELLOW DELICIOUS (1032) This apple is famous for its unique quality, embracing a combination of flavors which is hard to equal. This, combined with the fine, firm-textured flesh of the apple and the beautiful golden yellow skin, at once attracts the eye of the consuming public. The tree, while not a large growing type, is thrifty and extremely productive, coming into fruiting and giving an abundant crop while very young.

SPUR TYPE YELLOW DELICIOUS (1033)

A new spur-type Yellow Delicious apple. Fruits are borne in profusion all over the trees at a young age. Fruits are similar in every way to Yellow Delicious. We have found no evidence that Nugget is any more or less susceptible to russetting than regular Yellow Delicious.

Trees of Nugget are normally semi-dwarf—about one-half the size of regular trees. They are hardy, very productive, and easy to manage. Pollen is good and they may be interplanted with SkySpur Red Delicious for pollinating purposes.

Trees of Nugget are on standard rootstocks this year. This fine new spur-type Yellow Delicious will allow you to make extensive plantings of well anchored trees that will be small at maturity. See special Price List for one-year trees on standard rootstock only.

BOALSBURG, PENNA.

Aug. 1, 1969

C. M. RITTER

TO WHOM IT MAY CONCERN:

All saleable apple, pear, plum, sweet cherry, and sour cherry varieties propagated on standard seedling material and now growing at Bountiful Ridge Nurseries have been examined by the Pennsylvania Trueness-To-Name Inspection Service. To the best of our knowledge, these trees are true to name as they now stand in the nursery row.

FURTHER:

All saleable apple varieties propagated on clonal understocks and now growing at Bountiful Ridge Nurseries have been examined by the Pennsylvania Trueness-To-Name Inspection Service for trueness to name of rootstock, interstock if any, and variety. To the best of our knowledge all parts of these trees are true to name as they now stand in the nursery row.

C. Marshall Ritter

✓ ROANOKE-VPI 4 (1056) A new seedling of Red Rome crossed with a Northern Spy type, Schoharie. The fruits ripen five days before Delicious, are smooth, have nearly solid red color and good finish. Flesh is firm, mild in flavor, and has good quality. Fruits which keep well in storage are produced on round topped trees whose vigor is similar to that of Red Rome. A heavy producer of spurs, it blooms just a bit later than Rome and has good pollen.

✓ MACOUN (1035) Very highly colored, having no stripe. Same quality as McIntosh, same textured fruit, hangs to the tree better than McIntosh and ripens one to two weeks after Cortland. Tree about equal to McIntosh, a regular bearer, and strongly recommended to lengthen the McIntosh season.

✓ RICHARED DELICIOUS (1036) The best of the red sports of Delicious. It has superb quality, beautiful bright red color without stripe, and excellent shape. Trees are hardy, vigorous, and produce large annual crops. Fruits of Richared are large, very handsome, and good. They ripen all over the tree weeks earlier than regular Delicious. Richared is your best bet for elevations over 100 feet. An excellent storage apple, too.

✓ DOUBLE RED DELICIOUS (1037) Another sport of Delicious that ripens with a stripe. It is your best bet for an early coloring Delicious at low elevations. When planted in areas over 100 feet, it tends to get too dark and is not as handsome as Richared. It bears young and produces large crops of fine, beautiful Delicious apples. Very similar to Starking.

✓ WAYNE-SPUR RED DELICIOUS (1038) A very new and promising Spur Type Red Delicious from Virginia. Fruit is produced on spurs along scaffold limbs throughout the tree. Fruits are typical of Red Delicious in shape, are predominantly blushed red and of good size. Wayne-Spur colors earlier than Double Red Delicious, but ripens about the same time. Trees are true semi-dwarf and bear ample crops early in life. Storage life and firmness is better than Double Red Delicious. We recommend this fine new apple.

✓ **MUTSU (1039)** A new Yellow Delicious type apple from Japan that is highly resistant to russetting. Fruits are generally larger than Yellow Delicious and with coarser flesh. A possible replacement for Yellow Delicious because of its resistance to spray injury, late keeping qualities, vigorous growth of tree, and larger fruit. Pollen sterile—will not pollinate.

✓ **POCOMOKE (1040)** An excellent seedling found by Mr. Paul Sanguinetti of Vineland, N. J. Fruits are large, bright red in color, and smooth finished. Ripening date is near the end of Delicious and before Stayman. Our main interest in this new variety is its apparent drought resistance. The tree is vigorous, healthy, bears early, and annually. It seems to have the ability to size fruit well in the severest of drought conditions. Why not try some in your trouble areas?

✓ **EARLY RED STAYMAN (Neipling's) (1041)** Colors 100% all over the apple, from 10 to 20 days before the regular Stayman. Growers can pick the entire crop at one picking, if desired, and avoid losses. Cold storage tests show it will keep through to following May and come out with less scald, more flavor and more snap than any other type Stayman.

✓ **NORTHERN SPY (1042)** Large, roundish conical, often flattened, slightly ribbed; handsomely striped with red. Flavor rich, aromatic, mild sub-acid, fine. Keeps through winter and late into spring. Trees available on semi-dwarf rootstocks only.

✓ **TURLEY (1043)** The trees resemble Stayman and are vigorous, rapid growers, productive and early bearing. The apples average large to very large; skin smooth, coloring a bright attractive red over the entire apple. Flesh is firm; quality is good but cannot be classed as a high dessert apple. The value of this apple lies in the fact that it will not crack under normal conditions.

✓ **COLORA RED YORK (1044)** Earlier coloring, earlier picking, greater profits. The tree of Colora Red York has the same rugged characteristics as the old York Imperial, but will color 100% over the entire tree under most conditions. The Colora Red York can be picked from one to two weeks earlier than regular York. The entire crop can be picked at one time if desired. We do not know of any other type that will give the grower such attractive apples as the Colora Red York produces.

EARLY RED STAYMAN (Neipling's)

✓ **RED YORKING (1045)** Another red sport of York Imperial that has merit. We offer this variety to our customers who have experienced more success with Red Yorking than Colora Red York because of site conditions, etc.

✓ **MELROSE (1046)** A new late-keeping winter apple that is a cross of Jonathan and Delicious. Tree blooms later than either parent. Fruits ripen just before Stayman, keep well in cold storage until April, and so far have proven free of Jonathan spot.

Fruits are well covered with an attractive carmine and have a live yellow undertone. Fruits larger than Jonathan—firm, crisp, juicy, not as tart as Jonathan or as sweet as Delicious. Excellent cooking and dessert quality.

Tree bears moderately young, is upright, spreading, with good crotch angles, and develops to a reasonably large size.

✓ **DOUBLE RED STAYMAN—201 Type (1047)** One of the newer introductions which has found favor with some growers. Trees and fruit characteristics similar to Blaxtayman except that it has a more brilliant color which lays on earlier and does not get the dark shade often found in some Stayman types.

✓ **RUBY (1048)** A promising late-keeping apple. Ruby has great eye appeal because of its striking, brilliant over-all carmine-red. The tree resembles Rome in growth, bears early and produces annually. Blooms about with Gallia and just after Delicious. Picking date is about with Rome or just before Stayman. The flavor is good, surpassing that of Rome Beauty. It is somewhat juicy, neither sharp nor sweet but pleasingly mild; cooking does not detract from the flavor but seems to improve it; whether baked or stewed, the flesh has tendency to hold its shape well. Fruits hold well in storage into April and May, being less susceptible to scald than Rome Beauty.

BOUNTIFUL IMPROVED WINESAP

KING LUSCIOUS

U. S. PLANT PATENT No. 1994 (1049)

KING LUSCIOUS is probably the largest good apple to come to the planter in many years. KING LUSCIOUS was found by the late Wm. M. Dalton of Hendersonville, N. C., who later crossed it with Red Delicious and King David, resulting in the fine apple which we are pleased to introduce to our trade.

KING LUSCIOUS is a very large, highly colored apple with good keeping, eating, and cooking qualities. The skin is a deep red at maturity with a beautiful bloom. The flesh is pure white with excellent flavor. The season of ripening is with Rome Beauty and Stayman, although it may be picked sooner for cooking purposes if desired. The tree is a young and annual bearer, blooming a week after Rome Beauty to make it almost completely frost-proof.

The tree is semi-dwarf in habit, sets its scaffold branches well, and needs little pruning. Both tree and fruit are resistant to apple scab.

We believe KING LUSCIOUS has a place in every planting, not only because of its large size and attractive appearance, but because it is the most frost-resistant apple variety we know of.

Prices of controlled size King Luscious, Chesapeake, Tangier, and Pocomoke on page 29

WINTER BANANA (1050) Vigorous grower; early bearer. Fruit medium to large, smooth and handsome golden yellow, usually shaded with red blush. Flesh fine grained, rich sub-acid, aromatic; highest quality.

GALLIA BEAUTY—Red Rome (1051) Originated in Ohio and is a typical Rome type tree, being thrifty, hardy, and productive. The fruit of the Gallia Beauty colors a brilliant bright red, without stripe, and seems to be of higher quality than the regular Rome Beauty and keeps exceptionally well in storage. The Gallia Beauty will size up equal to the regular Rome, but many of the other inferior, so-called Red Rome types, will not size up satisfactorily. Again we urge you to plant only the Genuine Gallia Beauty. We offer you the best, and charge you no more.

JERSEY RED (1052) A cross of Gallia Beauty and White Winter Pearmain. Fruits are large round-oblato and color a deep attractive red. Very firm and late keeping as Rome. Holds to tree exceptionally well. The tree is very vigorous, with large heavy foliage resistant to blight and breakdown. Fruit seems a little better quality than most Rome types.

CHESAPEAKE (1053) A fine, new late keeping apple with outstanding quality developed by Frank Browning of Wallingford, Ky. Chesapeake is a chance seedling which seems to embody the best characteristics of the Stayman and Rome varieties. It is a large, red apple that ripens with Rome. Much like the Rome variety, Chesapeake keeps well into the winter, even in common storage. Its good flavor resembles that of Stayman and is mildly sub-acid. Fruits retain their juices well throughout storage and are excellent for fresh or culinary purposes.

Trees of Chesapeake are vigorous, productive, and bear at an early age. Blooms appear with those of Rome and are hardy. Spring frosts are not a problem. Trees are available on Standard and E.M. VII Rootstocks.

RED ROME—No. 262 Type (1054) This type Red Rome comes to us from the far West and has been planted widely in the Appalachian fruit area. Its merits over Gallia Beauty are questionable, but some growers like it better.

BOUNTIFUL IMPROVED WINESAP (1055) A glorified selection of the famous Winesap with the same beautiful color — same quality — same keeping ability found years ago in the orchard of The Consolidated Orchard Co. of Paw Paw, W. Va. This strain produces heavy annual crops of fruit that, very often, is as large as Stayman. The fruit has every characteristic of the Old Virginia Winesap in shape, color, quality, and growth habits. The tree is typical Winesap, including leaf markings. Bountiful Strain Imp. Winesap has become a favorite with orchardists for local and long-distance sales. Especially popular as an extra long keeping variety for use in polyethylene bags.

GALLIA BEAUTY

DWARF & SEMI-DWARF

"CONTROLLED SIZE"

APPLE TREES GROWN ON CLONAL ROOTSTOCKS

**LOWER PRODUCTION COSTS - SMALL TREES AT MATURITY
LARGE SIZE FRUIT - GOOD QUALITY - QUICK TO BEAR**

VARIETIES ON EAST MALLING NO. 9 ROOTSTOCK—DWARF

Smallest of all dwarf apples—The choice of most home owners

Very early to bear—6 to 10 foot tree at maturity.

1124 All Red Jonathan	1151 Gallia Beauty	1149 King Luscious
1121 All Red McIntosh	1125 Grimes Golden	1120 Skyline Supreme
1137 Double Red Delicious	1155 Improved Winesap	1132 Yellow Delicious
1141 Early Red Stayman (Neipling's)		1101 Yellow Transparent

This is the most dwarfing of all apple stocks being grown today. Trees start to bear in two to three years, producing large highly colored apples. Ideal for small gardens and now being used quite extensively by commercial growers. Trees on this rootstock must be staked or trained on wire, and grown on very rich, well-drained soil for best results.

VARIETIES ON EAST MALLING NO. 7 ROOTSTOCK—SEMI-DWARF

The most widely planted semi-dwarf rootstock—Medium sized tree that is easy to care for—Seldom needs staking—Grows well on most soils

1224 All Red Jonathan	1251 Gallia Beauty	1236 Richared Delicious
1221 All Red McIntosh	1225 Grimes Golden	1248 Ruby
1215 Beacon	1226 Idared	1220 Skyline Supreme
1209 Cauley	1249 King Luscious	1205 Tangier
1253 Chesapeake	1202 Lodi	1213 Tydeman's Red
1244 Colara Red York	1235 Macoun	1206 Wellington
1237 Double Red Delicious	1246 Melrose	1204 Williams' Early Red
1247 Double Red Stayman	1208 Molly's Delicious	1250 Winter Banana
1207 Early McIntosh	1242 Northern Spy	1232 Yellow Delicious
1241 Early Red Stayman (Neipling's)	1240 Pocomoke	1201 Yellow Transparent

The ideal stock for small, semi-dwarf trees, cordons and espaliers. Does particularly well on heavy clay soils. It has proven to be very hardy and has a good root system which makes a well anchored medium for small trees. Seems to grow vigorously in its early years but soon settles down to slower growth and heavy cropping. Generally recognized to be one of the best understocks for commercial planting as well as the home fruit grower.

VARIETIES ON MALLING 26—DWARF

Good for home and orchard—requires less staking than E. M. 9. Excellent for high density planting.

1424 All Red Jonathan	1451 Gallia Beauty	1402 Lodi
1421 All Red McIntosh	1425 Grimes Golden	1420 Skyline Supreme
1427 Double Red Delicious	1455 Improved Winesap	1432 Yellow Delicious
1441 Early Red Stayman (Neipling's)	1449 King Luscious	

An understock whose vigor range is ideal for high density plantings. Trees grow larger than on E. M. 9, but not quite as large as on E. M. 7. Growth is more vigorous and rooting is better than E. M. 9. Fruits color earlier and are large.

Malling-Merton Rootstocks Control Size, Too!

VARIETIES ON M. M. 104—SEMI-DWARF

1521 All Red McIntosh	1526 Idared	1540 Pocomoke
1515 Beacon	1549 King Luscious	1536 Richared Delicious
1551 Gallia Beauty	1502 Lodi	1520 Skyline Supreme
1525 Grimes Golden	1542 Northern Spy	1532 Yellow Delicious

Trees about the same size as E. M. 7 on sandy soils; about the same size as E. M. 2 on loam. Excellent root system does not need support. This makes the heaviest producing tree of any rootstock. Do not plant in wet areas.

VARIETIES ON M. M. 106—SEMI-DWARF

1624 All Red Jonathan	1626 Idared	1636 Richared Delicious
1621 All Red McIntosh	1655 Improved Winesap	1648 Ruby
1615 Beacon	1649 King Luscious	1620 Skyline Supreme
1653 Chesapeake	1602 Lodi	1627 Spartan
1644 Colara Red York	1635 Macoun	1605 Tangier
1623 Cortland	1646 Melrose	1613 Tydeman's Red
1637 Double Red Delicious	1608 Molly's Delicious	1604 Williams' Early Red
1647 Double Red Stayman	1639 Mutsu	1650 Winter Banana
1641 Early Red Stayman (Neipling's)	1642 Northern Spy	1632 Yellow Delicious
1651 Gallia Beauty	1640 Pocomoke	1601 Yellow Transparent
1625 Grimes Golden	1603 Quinte	

Tree size is the same as E. M. 7 in most areas. Trees produce well and early, are resistant to woolly aphids, and seldom sucker. They stand wet conditions better than M. M. 104. Recent plantings of this rootstock show much promise.

VARIETIES ON M. M. 111—SEMI-DWARF

1824 All Red Jonathan	1846 Melrose	1820 Skyline Supreme
1821 All Red McIntosh	1814 Red Gravenstein	1850 Winter Banana
1823 Cortland	1856 Roanoke	1832 Yellow Delicious
1851 Gallia Beauty	1857 Shenandoah	
1835 Macoun	1818 Summer Rambo	

Trees are about the same size as E. M. 2 but better anchored. This rootstock induces early bearing, resists drought, and gives large yields on small trees.

Dwarf Peaches

Can you imagine having your own beautiful, luscious fruit on your own peach tree, right in your back yard. These trees are small: never more than 7-8 feet tall, easy to spray, easy to prune. They bear heavy crops of large sized peaches, beginning in the second or third year and continuing for many years. All varieties listed are self-fruitful and need no cross-pollination. Full descriptions of these varieties can be found in the general peach section.

REDCHIEF (2106)

FRANCESCO (2109)

Garden State and Redchief—Same Price As Dwarf Peach;
Add 75c to Regular Dwarf Peach Price for Dwarf Francesco.

Dwarf Cherries

NORTH STAR (3530) A very small natural dwarf sour cherry that is self-fruitful. Fruit is similar to Morello and hangs well. Trees are small (8-10 ft.) but very hardy in wood and bud. Resistant to leaf spot.

METEOR (3531) A very winter-hardy dwarf sour cherry grows just a bit larger than North Star. Fruit has the same quality, size and shape as Montmorency.

Dwarf Plums

Beautiful Flowers—Delicious Fruit

Just about all one could expect from any tree. These very small plum trees make a fine addition to any home garden. Dwarf plums can be cared for the same as peaches, grow most anywhere, and can always be reached from the ground. Plant them 6 to 8 feet apart for wonderful results.

DWARF PEARS

**EASY TO GROW—EARLY TO BEAR
—TAKE LIMITED SPACE**

Bountiful Ridge DWARF PEARS come into bearing the second or third year and make a very profitable satisfying venture for the home owner and the commercial grower.

DWARF PEAR trees are low-headed—reach a maximum height of 7 to 9 ft. May be planted as close as 6 to 8 ft. apart. Insects and diseases are no longer a problem since small size makes spraying a simplified job.

Plant Bountiful Ridge Dwarf Pear Trees with confidence. All are grown on compatible QUINCE ROOT-STOCK for complete customer satisfaction.

EVERGREEN SEEDLINGS

Best for

TIMBER—WINDBREAKS—LINE MARKERS
CHRISTMAS TREES AND GENERAL ORNAMENTAL

Husky, well-rooted, 3-year Seedlings will give you a good and inexpensive start toward the sophisticated hedge, wind-break, or line marker you always wanted but thought you could never afford. Just pennies invested now, will soon be worth dollars as your young plants grow into maturity. Useless and marginal land can be profitable when planted to Evergreen Seedlings.

Don't forget the Christmas Tree market . . . Our Evergreen Seedlings are just the answer to added holiday fun. Sell them for profit . . . Use them yourself or give them to your friends. You'll be more than happy with the results.

RA-PID-GRO

(5503)

RA-PID-GRO is an approved formula containing Nitrogen 23%—Phosphoric Acid 21%—Potash 17% in combination with Vitamin B₁ and B₂ along with other elements necessary for normal plant growth.

RA-PID-GRO is shipped in dry form and water is added by the user to make one of the finest plant foods which can be purchased. One pound of RA-PID-GRO makes 22 gallons of the quickest acting fertilizer ever used for dipping stock when planting and putting around all plant growth. Makes 44 gallons of liquid for spraying on foliage. It will not burn when applied as a spray. It is 100% effective, as it contains no inert material.

Follow full directions included with every shipment for best results.

Two pounds	2.50
Five pounds	4.75
Ten pounds	9.00
Twenty-five pounds	21.00

SPRAYS

PRATT'S FRUIT TREE-SPRAY OR DUST (5501)

The new formula contains Captan 6.0%, Methoxychlor 10.0%, Malathion 6.0% and Sulfur 25.0%. One pound mixes with water to make 12 gallons of spray (5 lbs. per gallon of water). The inclusion of Sulfur in this formula gives miticide properties and powdery mildew control which the other materials alone will not do.

1 lb. \$1.39; 3 lbs. \$3.69.

PRATT'S SCALECIDE (5502)

The oldest and best known dormant oil spray for fruit trees, shade trees, and ornamentals. A 96% highly refined miscible oil meeting state specifications for superior type oil. Dormant spraying with Scalecide at half the concentration required for regular oil gives safe, effective control of scale, aphids, red mite, spruce gall, red spider and similar over-wintering insects. For orchard spraying and egg type of scale use 3 gallons per 100, for shade trees 2 gallons, and evergreens 1 gallon. 1 qt. \$1.49; 1 gal. \$3.50.

Save Fruits & Vegetables!

STOP BIRD DAMAGE

Not a plastic film . . . not a webbing, does not damage fruit or cling . . . light weight—easy to install reusable for many years "Durex" is the only 100% nylon anti-bird netting. "Durex" has been field tested and approved. "Durex" is available in 4 sizes.

FLOWERING CRAB

ALMEY FLOWERING CRAB (4102)

A thing of beauty at all seasons of the year. An exquisite masterpiece when in full bloom. One is constantly delighted with the myriad of crimson-red flowers that cover the shapely small tree—12 to 15 ft. at maturity—in the spring. Its dark green foliage is tinged with crimson-purple all summer. Almey produces an abundance of crimson fruits for a fall delight. You will be pleased with the many wonders presented you by this marvelous tree.

HOPA FLOWERING CRAB (4103)

Knowing gardeners everywhere choose Hopa for its never-failing fascination. The lovely, rosy pink blooms are fragrant and exquisite. No other tree or plant in the garden can equal the profusion of its bloom. The lustrous foliage is dark green with a red cast from early spring to frost. The blossoms are followed by small red apples that persist well into winter. The tree grows rapidly and reaches a perfectly proportioned 15 ft. at maturity.

ELEYI FLOWERING CRAB (4104)

A natural color ball of wine-red blossoms that creates a garden extravaganza in the spring. Sometimes called "Jay Darling" because it seems to thrive in most any location. The flowers bring hundreds of ruby-red fruits, just swell for jelly, that make it look like an early and natural Christmas tree into the winter. The tree is hardy to sub-zero and has few problems. Grows to about 12 ft.

Prices for all Flowering Crab, Peach, Plum

	Each	3	10
5 to 6 ft.	\$4.75	\$13.50	\$40.00
4 to 5 ft.	4.25	12.00	35.00
3 to 4 ft.	3.75	10.50	30.00

DOUBLE RED FLOWERING PEACH (4105)

Most hardy, profuse-blooming type; most desirable for home use. Flowers are very double, almost like a small rose and present a striking appearance.

The Beautiful Magnolias

MAGNOLIA SOULANGEANA. (4107) The best known of the deciduous Magnolias. Perfectly hardy and very beautiful plants when in bloom. Blossoms are large, purplish pink and usually appear just before the leaves come out. 18 to 24 in., \$3.95 each; 2 to 3 ft., \$5.50 each; 3 to 4 ft., \$7.50 each.

MAGNOLIA STELLATA — The Starry Magnolia. (4108) A distinct and charming, slow-growing magnolia. Blooms before foliage appears. Flowers pure white, semi-double and fragrant. A profuse bloomer and very attractive. 2 to 3 ft., \$5.50 each; 18 to 24 in., \$3.95 each.

MAGNOLIA GRANDIFLORA. (4109) The great evergreen, large-flowering magnolia of the South and Central areas. The most beautiful of all evergreen trees. Its immense, saucer-like, very fragrant flowers of white shading to cream present a striking appearance contrasted with the large glossy green leaves. Not hardy north of southern New York. 18 to 24 in., \$4.50 each; 2 to 3 ft., \$6.50 each; 3 to 4 ft., \$8.50 each.

MAGNOLIA SOULANGEANA

RED FLOWERING PLUM

THUNDERCLOUD (4106)

A magnificently colored, brilliant red tree for that touch of color so many of us want for a special place in our yard. This fine plant is covered in the spring with a profusion of star-like pink flowers. The beautiful red foliage lasts until frost. The tree is an upright grower to about 15 ft. and is easily managed in any home setting.

LONA BALDWIN (4101)

Fastigate Flowering Peach

Lona Baldwin is the finest upright flowering peach we have ever been privileged to see. The deep rose-pink blossoms are so abundant that one can hardly see the stems. Flowers last a long time, too—from mid-April to mid-May in Virginia where the original tree was found. The tree is so distinctly upright in habit that it may be used as a very colorful hedge if desired. Dr. J. T. Baldwin, Jr., discoverer of Lona Baldwin, advises that the fruit, though small, is very decorative and edible.

FLOWERING DOGWOOD

"CHEROKEE CHIEF" DOGWOOD

Red Flowering (4112)

A new fully red bud sport of famous pink dogwood that has been fully tested and widely grown with success. They are beautiful as specimen plants and in group plantings.

2 to 3 ft., bare root: \$5.50 each

3 to 4 ft., bare root: \$7.50 each

"CHEROKEE PRINCESS" DOGWOOD

White Flowering (4113)

A new completely white dogwood which has the fine characteristics of regular *Cornus florida*. Blooms are larger and more prolific. A very dependable variety.

2 to 3 ft., bare root: \$4.95

3 to 4 ft., bare root: \$6.95

WHITE DOGWOOD (4111)

(*Cornus florida*)

The white dogwood is one of nature's prettiest plants. The flowers appear early and persist until leaves are formed. Foliage is green through the summer, turning red in fall. Scarlet fruits are abundant and beautiful from late summer until frost. Mixed plantings of white and pink dogwoods are very effective.

Prices listed are for thrifty, bare root plants:

	Each	3	10
2 to 3 ft.	\$2.95	\$ 8.25	\$25.00
3 to 4 ft.	3.95	11.25	35.00

PINK DOGWOOD (4110)

(*Cornus florida rubra*)

A colored form of the native species Dogwood. It has the same habit of growth, period of bloom, and general behavior. Pink dogwoods are adapted to most of the central and northern areas and are a beautiful addition to any garden. They have bright deep rose colored blossoms which come in the early spring and last about two weeks. The foliage is a nice green which becomes a handsome red in the fall.

Prices listed are for thrifty, bare root plants:

	Each	3	10
2 to 3 ft.	\$3.95	\$11.25	\$35.00
3 to 4 ft.	4.95	14.25	45.00

Rosa Multiflora (4201)

THE WILD ROSE LIVING FENCE

Multiflora Roses are being used effectively to decrease soil erosion, as dividing line fences, wind breaks, screens for unsightly objects, to confine farm animals and as snow fences in winter.

The plants grow rapidly in most all types of soil and produce a fence up to eight feet in height in three to four years, then it stops, getting no taller. The fence needs no pruning or care after the initial setting.

Where a close hedge or screen is desired, we suggest planting one foot apart. For more open hedge they may be planted two or three feet apart in a single row.

The fence is a beautiful sight in bloom putting on a gorgeous display for about two weeks. Thereafter seed pods are formed to furnish food for the birds.

Prices of ROSA MULTIFLORA

	25	50	100	500
Jumbo, 18" up	\$9.00	\$13.50	\$20.25	\$58.50
Strong, 12-18"	6.00	9.00	13.50	39.00
Light, 6-12"	3.00	4.50	6.75	19.50

Crimson King Maple

(4403)

This is the real red maple you have been waiting for. It is a beautiful form of the Schwedler Maple with intense red foliage throughout the growing season. Unlike other red maples, the color of the Crimson King does not fade as the summer progresses. This fine tree originated in Europe and has been under observation in this country for many years. We know it is adapted to our soils and climates, that it is perfectly hardy, and that it can be grown in most any location. Crimson King is truly a "TREE OF BEAUTY." 4 to 5 ft., \$5.95 each; 5 to 6 ft., \$6.95 each.

Flowering Cherries

KWANZAN. (4114) Large double pink blossoms borne in profusion. Tree vigorous and upright in growth.

4 to 5 ft., \$7.50 each

DEAR SIR:

Thank you for reserving the trees for us. The trees arrived in very good condition. It has been a pleasure to do business with you.

Mrs. George Suchar
Pennsylvania

NUT TREES

THOMAS BLACK WALNUT

THOMAS BLACK WALNUTS (5001)

(Grafted For Your Insurance)

One of the largest and finest Black Walnuts yet found. Kernels large, light colored; nearly all crack out in whole halves. Tree extremely vigorous and hardy.

2 to 3 ft., \$5.50 each; 2 for \$10.50
3 to 4 ft., \$6.00 each; 2 for \$11.50

NEW . . . HARDY GRAFTED CARPATHIANS

COLBY (5010) One of the hardest varieties for the mid-west and middle Atlantic areas. This medium sized nut is thin shelled, cracks out in halves, has light meat, good flavor and quality.

LAKE (5011) This is one of the largest Carpathians, having good quality and fine flavor. It cracks out in halves and has proven its hardiness in the mid-west and middle Atlantic areas over the last ten years.

2 to 3 ft., \$5.95 each; 2 for \$11.50
3 to 4 ft., \$6.95 each; 2 for \$13.50

ENGLISH WALNUTS (5012)

Very Hardy Types—Large, Thin Shelled

English Walnut production is proving practical and desirable in the East Central areas. Tree valuable for its fruit and shade. The nuts are thin shelled, with full-meated kernels of delicious flavor. Tree is hardy and productive.

2 to 3 ft., \$3.95 each; 2 for \$7.50
3 to 4 ft., \$4.95 each; 2 for \$9.50

HARDY CARPATHIAN WALNUT SEEDLINGS (5013)

2 to 3 ft., \$3.95 each; 2 for \$7.50
3 to 4 ft., \$4.95 each; 2 for \$9.50

SHAGBARK HICKORY (5015)

(Seedlings)

Beautiful trees for shade, home, or orchard planting. Shagbarks thrive on marginal soils and are adapted to growing from north Florida to New England and west. Nuts are creamy white, sweet, hard but thin-shelled. Trees are somewhat slow growers, but exceptionally durable.

18 to 24 inch plants, \$3.95
2 to 3 ft., \$4.95; 3 to 4 ft., \$5.95

HARDY NORTHERN GRAFTED PECANS

MAJOR (5020) This is perhaps one of the best of the northern pecans, for growth, disease resistance and regular bearing. Very high quality nut, thin shell, small, plump, sweet. A splendid tree, starts bearing the third or fourth year after transplanting.

COLBY (5021) This fine new variety originated in Illinois and was introduced commercially in 1957. It is a northern type nut maturing in 160 days and has proven very hardy in the Illinois area. The nut is long, oval, and of good flavor. It excels other extra early types in both size and productivity.

NEW LOW PRICES

2 to 3 ft., \$4.95 each; 2 for \$9.50
3 to 4 ft., \$5.95 each; 2 for \$11.50

GRAFTED PAPER SHELL PECANS

(Southern Types)

STUART PECAN (5022) Extremely hardy and a strong grower. Nuts of good size and well filled. Shell very thin and easily opened.

SCHLEY PECAN (5023) The Schley is thrifty, strong grower; nuts long, well filled, with a very thin paper-like shell.

DESIRABLE (5024) The Desirable is another selection which has been much recommended as a very productive and comparatively hardy self-pollinating variety suitable for home and commercial planting. We feel that this is a very desirable addition to the older established varieties of thin shelled pecans.

	Each	3	10	20
2 to 3 ft.	\$4.50	\$12.75	\$40.00	\$75.00
3 to 4 ft.	5.00	14.25	45.00	85.00

HICAN TREES

Pecan X Shellbark Hickory Hybrids

CLARKSVILLE (5030) Trees grow with great vigor, symmetry and beauty. Foliage is dark green, makes a beautiful ornamental tree as well as producing large high quality nuts which are thin shelled and fine flavored. Trees are hardy in Northern areas.

GERARDI (5031) Tree grows very much like the Clarksville and is hardy in Northern areas. Nuts are often 2 inches long and about 3/4 inch in diameter. Very fine flavored, with good cracking qualities.

NEW LOW PRICES

2 to 3 ft., \$5.50 each; 2 for \$10.50
3 to 4 ft., \$6.50 each; 2 for \$12.50

**HALL'S HARDY ALMOND (5035)**

New—Beautiful—Delicious

A fine new plant with beautiful blooms and delicious nuts. Hall's Almond thrives where peaches are grown, growing rapidly and bearing heavy at an early age. It is a fine dual purpose plant and can be added to most landscape plantings with ease. Better results are obtained when two or more trees are used.

	Each	2 for	5 for
5 to 6 ft.....	\$5.50	\$10.50	\$24.95
4 to 5 ft.....	4.50	8.50	19.95

2 to 3 ft.....	3.00	5.50	12.50

FILBERTS

✓ **BARCELONA FILBERT (5040)** Possibly the most widely planted type for commercial plantings in the Northwest. Larger than the native filbert, heavy and consistent bearer.

✓ **DUCHILLY FILBERT (5041)** Widely used to pollinate Barcelona. Nuts are large and attractive.

2 to 3 ft., \$3.50 each; 2 for \$6.50

✓ **AMERICAN FILBERT (Hazel Nut) (5042)**

The family favorite, attractive bush, yielding abundant crops. Bears young. Does not grow a large tree. Plant two or more for pollination.

2 to 3 ft., \$2.50 each; 2 for \$4.75

FILBERTS

✓ Chinese CHESTNUTS (5050)

Early Bearing, Fast Growing, Blight Resistant Trees

We highly recommend planting Chinese Chestnuts for beauty, shade and delicious nuts on hillsides, in pastures, on roadsides, in barnyards, in lawns, and in areas where general farming operations fail because of topographical conditions. Blight resistant Chinese Chestnut trees will thrive on any site which will support other tree vegetation.

Chinese Chestnuts are early to bear and give quick profits. Many growers are now receiving fifty to ninety cents per pound for their nuts. Others with only a few trees are supplying their own needs with ease. You, too, can enjoy them with a minimum of expense and care. Write for our up-to-date cultural directions on BLIGHT RESISTANT CHINESE CHESTNUTS.

We are offering the finest types of hardy, blight resistant and high quality chestnuts our Government representatives could find in the great chestnut producing areas of China.

ASPARAGUS

THE GROWER'S FAVORITE

ROBERT'S STRAIN MARY WASHINGTON (6401)

Developed by selection from the original Mary Washington. It is a new type possessing very large spears, giving heavy yields, and having exceptional vigor. The most RUST-RESISTANT strain offered to the planter today. ROBERT'S STRAIN is being accepted by the large commercial planters of the East almost exclusively for their new plantings.

MARY WASHINGTON (6402)

The old stand-by of asparagus planters. A strong grower with large stock, attractive green color and rich, tender spears. Also RUST-RESISTANT and recommended for planting in most all localities. Bears early and gives heavy yields.

RHUBARB

MacDONALD RED (6410)

This is one of the best RED RHUBARBS now offered. It is suitable for field growing or forcing. The plants are healthy, strong growers, producing long, deep red to pink ribs of very fine flavor.

VALENTINE (6411)

The newest and best of all red rhubarb. Stalks are very sweet, with a pleasingly tart after-taste. This is a vigorous, tender and smooth new variety with even, bright red color all through the stalk. Valentine is excellent for home use, makes wonderfully delicious pies and bright red sauce. Try Valentine and use less sugar than you ever dreamed possible. It's the best.

CHIPMAN'S CANADA RED (6412)

This splendid type rhubarb is a favorite of the red types. It is unique in that the entire rib is a pleasing cherry-red all the way through, having a pleasing rhubarb taste when prepared for serving. The ribs are not quite as large as some other varieties, but its color and flavor sell it readily.

GRAPE VINES

A Grape For Every Purpose—At Lowest Prices

GARDEN GRAPES

DELAWARE (6001) One of the highest quality grapes in cultivation. Extremely hardy. Adapts readily to various conditions. Matures its crop early. Has very attractive appearance. Keeps and ships well and is immune to black rot. Clusters are well shouldered, compact, light red.

CONCORD (6002) The standard by which all other black grapes are judged. No vineyard is complete without a liberal planting of Concord. Our Concord vines are well rooted and are guaranteed to give perfect satisfaction, producing huge quantities of deep purple grapes of fine flavor.

CATAWBA (6003) Bunches medium size, shouldered. Grapes large, deep coppery red, juicy, sweet, rich.

CACO (RED) (6004) Of the highest quality, so rich in sugar and excellent flavor it can be eaten two weeks before it is ripe. The grapes are very large; bunch good size, compact and good form. The vines are strong growers, hardy and prolific. Ripens one week before Concord.

FREDONIA (6005) The earliest good black grape. The vine is vigorous, hardy and productive and ripens its fruits two weeks earlier than Concord. The clusters are medium size and compact. Berries are large and round; the skin is thick and tough. The flesh is juicy, solid but tender and very good quality.

SHERIDAN (6006) A late keeper to extend the Concord season. Under similar conditions the plants are just as hardy, vigorous, healthy and more productive than Concord. The bunches are large and compact; berries are large and very firm. The flavor is sweeter and richer than Concord. Ripens week later than Concord.

NIAGARA (6008) Occupies same position among the white varieties as Concord among the black. Bunch and berries are large, greenish white changing to pale yellow when fully ripe. Skin thin but tough; quality much like Concord.

GOLDEN MUSCAT (6009) Possesses the rich golden color of Diamond and the fine muscat aroma of the European Muscat. For home use or roadside market it is one of the best. Vine vigorous and productive. Clusters large, berries handomest and best flavored grapes grown in eastern America. Ripens after Concord.

INTERLAKEN SEEDLESS (6010) A very hardy California seedless type grape you can grow in your own garden. Hardy to 15 degrees below zero. Interlaken produces loads of amber-colored, crisp, juicy and delicious fruit. It ripens early and brings added flavor to summer salads and fruit dishes. For flavor, quality, and "lip-smackin' good eatin'", plant Interlaken this spring.

DEAR SIR:

I received my asparagus plants last night, special delivery. They were in lovely condition. I have just finished planting them. Thank you for sending them this nice weather.

Mrs. Hattie Howard
Maryland

MUSCADINE GRAPES

These fine grapes grow vigorously and produce heavy crops from Delaware to Texas. Dearing and Magoon are self-fruitful and are needed to pollinate Hunt, Higgins, and Scuppernong. One vine will pollinate nine others.

HIGGINS (6020) Clusters large, pink to reddish bronze; skin thick, edible. Fruit very large; quality good; production very heavy. Ripens midseason to late. This is the largest of all muscadines and a valuable addition to any vineyard. Needs pollination.

SCUPPERNONG (6021) Clusters medium size, bronze; fruit medium to large; skin medium to thin; quality excellent. Ripens early. It has a sweet foxy flavor that is agreeably tart. The most popular muscadine variety. Needs pollination.

HUNT (6022) Clusters large; fruit medium to large. Skin medium to thin, black; excellent quality. Ripens early midseason. Hunt is the best all-purpose black muscadine. It is excellent for wine, unfermented juice, jelly, jams, and all other commercial purpose. Needs pollination.

DEARING (6023) Perfect-flowered. Bronze clusters of medium size; skin thin; fruit medium to small. Excellent quality; production heavy. Ripens midseason. The best bronze perfect-flowered muscadine. Self-fruitful and will pollinate Higgins, Hunt, and Scuppernong.

PAMLICO (6024) A new light green variety with large fruit and attractive appearance. Flavor is good. Pamlico ripens about one week before Dearing, is vigorous and productive. Self-fertile. Good white pollinator.

ROANOKE (6025) A good white variety ripening about a week before Scuppernong. Fruits are large, attractive, and good. Vines very vigorous and productive. Self-fertile and a good pollinator.

MAGOON (6026) Fruits are reddish black, medium to small size. Excellent quality; heavy production. Ripens mid-season. The best black self-fertile muscadine.

NOTE: Be sure to buy your blueberry plants by graded height and age rather than by age alone. The plants we offer are of bearing age.

We suggest from eight to twelve plants for a family of five people. Ask for and follow our free cultural directions. Plant our blueberries this year for pleasure and profit.

Varieties listed in order of ripening

WEYMOUTH (6501) Earliest of all. Ripens berries quickly for early markets. Fruit is above medium in size and usually of fair dessert quality. Bush erect, open, spreading, of average vigor.

EARLBLUE (6502) Fruit clusters of medium size; berries oblate, light blue, very firm, sub-acid. Flavor very good. Earliblue ripens early, with Weymouth. Bushes are upright, very vigorous, well shaped and good producers.

STANLEY (6503) A recent development recognized in New Jersey blueberry sections as one of the outstanding blueberries. Vigorous plants, large berries, very productive.

✓ **BLUERAY (6504)** The fruit is large, with a medium light blue color, medium scar, fine flavor, and resists cracking. It matures with Ivanhoe and Rancocas. The bush is hardy and very productive.

✓ **IVANHOE (6505)** Fruits are large, attractive, slightly later than Stanley, with a good blue color. Flavor is good. Plants are vigorous, productive, and more tolerant of danker than Stanley.

✓ **RANCOCAS (6506)** The bush of slender, vigorous, upright habit rarely surpasses 6 feet in height. Winter twigs are a dark red. The berries are somewhat larger than those of Rubel and begin to ripen several days earlier.

✓ **CONCORD (6507)** The bush is upright and at maturity exceeds 6 feet in height. Young growth is bright red in winter. The berries are large, frequently reaching 3/4 inch in diameter. They usually ripen a few days earlier than Rubel and are fine in flavor and appearance.

The large cultivated blueberry has unlimited possibilities as a fresh fruit, a canned or frozen product, or for pure ornamentation. The plants should have a place in every farm or home garden lot.

Blueberries require an acid soil containing an abundance of organic material. They need a good supply of soil moisture, with good drainage. Most good gardeners will mulch their plants rather than cultivate them, since the plants are shallow rooted and do not tolerate close working.

Good blueberry soil can be created by use of quantities of compost or other organic material, worked into the surface of the soil. Use aluminum sulphate to bring the pH level down to an optimum 5 to 6 range.

Blueberries need pollination, and at least two varieties should be planted. Free and complete cultural directions sent upon request.

BERRIES

THE BUSH BERRY FAMILY!

Most All Sections of The Country.
Wonder Berry. Beauty of Leaf and Wood
Ornamental

BLUECROP (6508) Fruit clusters of Bluecrop are large. Berries are roundish oblate, very light blue, very firm. Sub-acid; flavor good. Bluecrop ripens in midseason with Concord and Atlantic. Bush upright and vigorous; very consistent producer.

ATLANTIC (6509) Late midseason. A cross between Jersey and Pioneer which has two outstanding traits—one being its superior size and non-cracking during wet weather, the other is its handsome color and fine flavor. A heavy producer fruiting about with Rubel but much larger in size, better in quality and flavor. Requires less time to prune than Rubel.

JERSEY (6510) The bush is vigorous and large. The winter color of the young growth is a light red over a gold-brown. Berries are the largest of any here listed, of a very light color, and ripen at the same time as Rubel.

BERKELEY (6511) Fruit is light blue. Considered one of the largest blueberries yet introduced. Berries are not subject to crack, ripen about a week after Stanley. Plants are very productive.

HERBERT (6512) Fruit clusters are loose; fruit ripens about the same time as Jersey, earlier than Coville but later than Berkeley. Berries of Herbert are large and carry their size well through ripening season. Firm, resistant to cracking; color about the same as Jersey, Rubel and Dixi. Flavor is equal to the best varieties. Fruit hangs well on bush. Bushes flower late, are thrifty growers and consistently productive.

COVILLE (6513) Selected to give larger berries of good quality and color. Ripening after Dixi, Rubel and Jersey, Coville is rated as our latest blueberry. Large, good blue color, good quality. Hangs well to clusters even when ripe, thereby requiring less picking. Thrifty plants.

RASPB

BOUNTIFUL RIDGE LEADS THE WA

New! Try Them!

← EARLY CUMBERLAND (Black) (6301)

(On's Strain)

Just the Berry to precede Cumberland; this fine new variety ripens five to ten days earlier than Cumberland. It produces heavy crops on vigorous canes. Yields are better than Bristol; berries carry as well as Cumberland. Early Cumberland berries are large, jet black, very firm and have a delicious, sweet flavor. We think Early Cumberland has a place in every black raspberry planting.

Prices for Pennridge and Early Cumberland

6	10	25	50
\$3.60	\$5.50	\$11.60	\$19.25

100	500	1000
\$32.00	\$120.00	\$180.00

CUMBERLAND (Black) (6305)

Cumberland stands as America's leading black raspberry. It is the choice of commercial growers in central and northern regions. One of the largest of the black-caps. Plants are healthy, vigorous growers, throwing up stout, well-branched canes that produce immense crops of magnificent berries. The fruit is large and holds up well during the picking season. Very firm, and rated as one of the most delicious of black raspberries.

NEW MORRISON (Black) (6306)

Berries are extremely large, many measuring over ¾ inch in diameter, and they do not crumble. A little later than Cumberland. Has fine dark glossy color and berries hold up well after picking, having exceptionally good quality. A worthy variety for planting anywhere.

PRICES FOR ALL RASPBERRY PLANTS— EXCEPT PENNRIDGE & EARLY CUMBERLAND

All prices are net F.O.B. our Nursery

6	10	25	50
\$3.25	\$4.50	\$9.50	\$16.50

100	500	1000
\$27.50	\$99.50	\$160.00

All Black Raspberries are heavy 1 yr., No. 1 tips.

All Red and Everbearing Raspberries are heavy rooted No. 1 Sucker plants.

We have a fine supply of thrifty, well rooted plants for our customers. Let us quote you if you want larger quantities. Free Cultural Directions sent upon request.

BLACK HAWK (Black) (6302)

Black Hawk originated in Ames, Iowa. It is a very large, nearly round, non-crumbling, firm berry. Black Hawk stands up well under commercial handling and the quality is excellent whether used fresh, frozen, or in jams, pies, or sauces. Flavor is sweet to mildly acid. Its picking season lasts from 10 to 14 days. The bush is vigorous, very hardy, and highly productive.

NEW LOGAN (Black) (6303)

One of New Logan's outstanding characteristics is its resistance to mosaic and other raspberry diseases. The berry ripens one week earlier than Cumberland. It is a heavier yielder and the glossy black berries are as large. It holds up well through drought. The last picking is as fresh and free from seediness as the first.

A thrifty grower, and although not as upright as Cumberland, our growers find this no objection if the summer shoots are topped higher than normal.

BRISTOL (Black) (6304)

Bristol is one of the best black raspberries being grown. It ripens just a few days before Cumberland. The berries are large and firm, fairly glossy and very attractive. Quality is one of the best. The bushes are very hardy and vigorous. Bristol rates as one of the heaviest bearing black-caps now known. From observation and reports coming to us, we can recommend it highly to planters for either commercial markets or home use.

New Amber Raspberry

DELICIOUS — NOVEL (6340)

Amber is an outstanding new raspberry for the novelty market and home gardener. Introduced by the N. Y. Experiment Station, it is amber in color, sweet flavored, of good quality, and does not crumble. Berries are large. Amber ripens late and extends the season for home-grown raspberries.

BERRIES

FOR MORE PROFIT IN RASPBERRIES

New! Try Them!

✓ OTT'S PENNRIDGE (Red) (6320) ➔

We are pleased to introduce to our customers one of the finest new red raspberries we have ever seen. Ott's Pennridge originated in Bucks County, Pa., on the farm of Mr. H. Lloyd Ott. He was first attracted to this new berry when he noticed a few plants of outstanding vigor and berry size among his Latham. He propagated from these original plants, and after several years of selection and testing, he asked us to see the fine results of his work. We found this new berry most exceptional.

OTT'S PENNRIDGE is a large, healthy, vigorous grower that averages one to two feet taller than Latham. The berries are about 50% larger than Latham, and ripen some 10 days later. Test trials indicate that these large, heavily loaded plants out-yield most other red raspberries two to one. OTT'S PENNRIDGE berries have excellent flavor and carry as well as the best of the leading red raspberries.

INDIAN SUMMER (6330) EVERBEARING RED

The quality is good and the season very early, starting a day or two later than June varieties. The fall crop commences in mid-September, continuing until stopped by hard freezes in November. The bulk of the crop is borne in October. Plants are above medium to tall, vigorous, upright, hardy, healthy, productive. Fruit is large and uniform, maintaining size throughout the season. Roundish conic in shape, cavity of medium size, smooth light bloom, color medium red. Juicy, tender, mild sub-acid, good.

✓ SEPTEMBER (6331) EVERBEARING RED

The plants are vigorous and disease resistant. The berries are shaped similar to Latham, bright red, firm, not crumbling. Ripens its fall crop two to four weeks earlier than Indian Summer and continues until frost. The spring crop ripens early and plants are very productive.

- 6 LATHAM (Red)

12 No. 1 Plants for.....\$4.50
Double This Order for.....8.50

✓ LATHAM (Red) (6321)

The popular mosaic-free, hardy raspberry. Without question Latham is the most profitable red raspberry for commercial planting. It is absolutely hardy. It cannot be surpassed in productiveness. Due to its rich brilliant red color it sells readily on market stands, is a delightful table berry and almost perfect for canning. The berries are large, round and unusually firm, exceptionally well suited for shipping to distant markets. It ripens evenly over a long season.

✓ TAYLOR (Red) (6322)

This beautiful berry should have the consideration of every commercial raspberry grower.

The plants are vigorous, hardy, productive, tall growing and make new plants rapidly. Sturdy canes hold the berries well off the ground. Berries ripen shortly before Latham, are large, long conic, bright attractive red, thick fleshed, very firm, sub-acid and of excellent quality, being superior to Latham. The berries do not cling to the bush and carry well to markets.

✓ HILTON (Red) (6323)

The largest of all red raspberries grows on vigorous plants that are winter hardy and produce heavy crops. Berries maintain good size throughout the season, are firm, of good quality and ripen in late mid-season. We think this fine new berry is worthy of trial for home and commercial planting.

✓ SUNRISE (Red) (6324)

This berry ripens 10 to 16 days earlier than Latham. Its size is near the size of Latham.

It has been very resistant to anthracnose, leaf spot, cane blight, and the resistance shown is probably one of the important factors in its ability to withstand low temperatures.

The color is bright red but turns dark red on ripening. The berries pick easily. They are firm, fine textured, juicy, non-crumby, sub-acid in flavor with good raspberry aroma, and better in quality than Latham.

RASPBERRIES

BOUNTIFUL RIDGE LEADS THE WAY TO MORE PROFIT IN RASPBERRIES

✓ **New! Try Them!**

← **EARLY CUMBERLAND (Black)** (6301)
(Ott's Strain)

Just the Berry to precede Cumberland; this fine new variety ripens five to ten days earlier than Cumberland. It produces heavy crops on vigorous canes. Yields are better than Bristol; berries carry as well as Cumberland. Early Cumberland berries are large, jet black, very firm and have a delicious, sweet flavor. We think Early Cumberland has a place in every black raspberry planting.

→ **OTT'S PENNRIDGE (Red)** (6320)

We are pleased to introduce to our customers one of the finest new red raspberries we have ever seen. Ott's Pennridge originated in Bucks County, Pa., on the farm of Mr. H. Lloyd Ott. He was first attracted to this new berry when he noticed a few plants of outstanding vigor and berry size among his Latham. He propagated from these original plants, and after several years of selection and testing, he asked us to see the fine results of his work. We found this new berry most exceptional.

OTT'S PENNRIDGE is a large, healthy, vigorous grower that averages one to two feet taller than Latham. The berries are about 50% larger than Latham, and ripen some 10 days later. Test trials indicate that these large, heavily loaded plants out-yield most other red raspberries two to one. OTT'S PENNRIDGE berries have excellent flavor and carry as well as the best of the leading red raspberries.

✓ **INDIAN SUMMER (6330)**
EVERBEARING RED

The quality is good and the season very early, starting a day or two later than June varieties. The fall crop commences in mid-September, continuing until stopped by hard freezes in November. The bulk of the crop is borne in October. Plants are above medium to tall, vigorous, upright, hardy, healthy, productive. Fruit is large and uniform, maintaining size throughout the season. Roundish conic in shape, cavity of medium size, smooth light bloom, color medium red. Juicy, tender, mild sub-acid, good.

✓ **SEPTEMBER (6331)**
EVERBEARING RED

The plants are vigorous and disease resistant. The berries are shaped similar to Latham, bright red, firm, not crumbling. Ripens its fall crop two to four weeks earlier than Indian Summer and continues until frost. The spring crop ripens early and plants are very productive.

ALL-SUMMER RASPBERRY COLLECTION (6390)

TWO-COLOR RASPBERRY COLLECTION (6391)

6 CUMBERLAND (Black)	
6 LATHAM (Red)	
12 No. 1 Plants for.....	\$4.50
Double This Order for.....	8.50

✓ **LATHAM (Red)** (6321)

The popular mosaic-free, hardy raspberry. Without question Latham is the most profitable red raspberry for commercial planting. It is absolutely hardy. It cannot be surpassed in productiveness. Due to its rich brilliant red color it sells readily on market stands, is a delightful table berry and almost perfect for canning. The berries are large, round and unusually firm, exceptionally well suited for shipping to distant markets. It ripens evenly over a long season.

✓ **TAYLOR (Red)** (6322)

This beautiful berry should have the consideration of every commercial raspberry grower.

The plants are vigorous, hardy, productive, tall growing and make new plants rapidly. Sturdy canes hold the berries well off the ground. Berries ripen shortly before Latham, are large, long conic, bright attractive red, thick fleshed, very firm, sub-acid and of excellent quality, being superior to Latham. The berries do not cling to the bush and carry well to markets.

✓ **HILTON (Red)** (6323)

The largest of all red raspberries grows on vigorous plants that are winter hardy and produce heavy crops. Berries maintain good size throughout the season, are firm, of good quality and ripen in late mid-season. We think this fine new berry is worthy of trial for home and commercial planting.

✓ **SUNRISE (Red)** (6324)

This berry ripens 10 to 16 days earlier than Latham. Its size is near the size of Latham.

It has been very resistant to anthracnose, leaf spot, cane blight, and the resistance shown is probably one of the important factors in its ability to withstand low temperatures.

The color is bright red but turns dark red on ripening. The berries pick easily. They are firm, fine textured, juicy, non-crumblly, sub-acid in flavor with good raspberry aroma, and better in quality than Latham.

✓ **BLACK HAWK (Black)** (6302)

Black Hawk originated in Ames, Iowa. It is a very large, nearly round, non-crumbling, firm berry. Black Hawk stands up well under commercial handling and the quality is excellent whether used fresh, frozen, or in jams, pies, or sauces. Flavor is sweet to mildly acid. Its picking season lasts from 10 to 14 days. The bush is vigorous, very hardy, and highly productive.

✓ **NEW LOGAN (Black)** (6303)

One of New Logan's outstanding characteristics is its resistance to mosaic and other raspberry diseases. The berry ripens one week earlier than Cumberland. It is a heavier yielder and the glossy black berries are as large. It holds up well through drought. The last picking is as fresh and free from seediness as the first.

A thrifty grower, and although not as upright as Cumberland, our growers find this no objection if the summer shoots are topped higher than normal.

✓ **BRISTOL (Black)** (6304)

Bristol is one of the best black raspberries being grown. It ripens just a few days before Cumberland. The berries are large and firm, fairly glossy and very attractive. Quality is one of the best. The bushes are very hardy and vigorous. Bristol rates as one of the heaviest bearing black-caps now known. From observation and reports coming to us, we can recommend it highly to planters for either commercial markets or home use.

✓ **New Amber Raspberry**

DELICIOUS — NOVEL (6340)

Amber is an outstanding new raspberry for the novelty market and home gardener. Introduced by the N. Y. Experiment Station, it is amber in color, sweet flavored, of good quality, and does not crumble. Berries are large. Amber ripens late and extends the season for home-grown raspberries.

PRICES FOR ALL BLACKBERRY PLANTS

1-yr. No. 1 Plants				
6	10	25	50	100
\$3.60	\$4.95	\$10.60	\$17.50	\$29.95

EBONY KING (6201)

The sensational new, heavy-bearing blackberry that is proving superior because of its ability to bear consistent heavy crops. Also contributing to the popularity of this fine variety is the fact that non-bearing plants are easily distinguished and may be removed from the planting when necessary. Berries are large, glossy black, with very high dessert quality. Fruit is suitable for processing, home use, and for fresh fruit markets. Fruit ripens early. Plants are thrifty and hardy.

DARROW (6202)

This is the finest of all new blackberries. Darrow produces very large crops of delicious, firm berries. These luscious berries measure about 1 inch long and as much as $\frac{3}{4}$ inch wide. Plants are vigorous, very winter hardy, and produce well at an early age. Try some!

LAVACA BERRY (6210)

A seedling of the boysenberry, resembling its parent most but having higher production, larger berries, and more resistance to cold and disease. The berries are firmer, less acid, and of higher general quality. It is superior for freezing. We feel it to be a handsome addition to your small fruits planting.

New—THORNFREE (6203)

A fine new thornless blackberry from the U.S.D.A. that is hardy in all but the most northern areas of the United States. Fruits of Thornfree ripen about three weeks later than Eldorado and about one week earlier than Smoothstem. Fruits are medium-large, glossy, firm, blunt, and good. Canes are not so vigorous as Smoothstem, generally trailing the first year after planting, but semiupright thereafter.

New—SMOOTHSTEM (6204)

A completely thornless companion variety to Thornfree that was originated by the U.S.D.A. The canes are vigorous, productive, and hardy to central Ohio. Fruits ripen about one month after Eldorado. They are large, firm, blunt, jet black and of good flavor. Plants of Smoothstem and Thornfree do not sucker.

BOYSENBERRY (6215)

A giant of the blackberry type. More flavorful than the blackberry and can be picked over a longer period of time. Yields are extremely high. The plant is a vigorous grower and should not be planted closer than 6 feet apart. It seems to do much better when trained on wires similar to grapes. Plants are especially resistant to disease and drought. Try them this year.

THORNFLESS BOYSENBERRY (6216)

Has the same characteristics as the boysenberry except for the fact that the vines are THORNFLESS. Can be easily handled at all times without gloves.

DEWBERRIES (6220)

LCRETIA Perfectly hardy and remarkably productive; said to be the best of this class of fruit. Ripens early. Often $1\frac{1}{2}$ inches long by 1 inch in diameter; sweet luscious and melting.

Our Best
Disease Resistant

STRAWBERRIES

✓ SURECROP (7018)

MULTIPLE RESISTANCE TO RED STELE—FINE FLAVOR
VERY HEAVY PLANT PRODUCER
Excellent Size . . . Good Yields . . . High Prices

SURECROP is a really fine new strawberry variety wherever grown, from Pennsylvania and New York to southern Virginia and westward to Ohio.

SURECROP is a midseason berry. The berries are a light, bright red which turns to a deep rich color. Seeds are a nice bright yellow set even with the surface. SURECROP berries are firm, with a tough glossy skin which makes them ideal for distant markets. They have also been recommended for freezing. Size holds well throughout the season.

A very vigorous plant maker and producer, rivaling such varieties as Pocahontas and Robinson as the best bed makers of all strawberry varieties. Coupled with Sunrise as a fine early berry, SURECROP as a midseason berry will deliver a MONEY-MAKING, RED STELE RESISTANCE PUNCH for growers everywhere.

✓ SUNRISE (7003)

Resistant to Red Stele and Verticillium Wilt
Early . . . Vigorous . . . Productive

Sunrise is a new early berry with multiple resistance to red stele. Berries of medium size, with glossy surface and a light, bright red color. They retain an attractive appearance long after picking. The berries are conic shaped, and have good dessert quality. Flesh is firm, pale pink in color, but not dark enough for good frozen pack appearance.

Plants produce runners freely, are very vigorous, and highly resistant to four races of red stele and partially resistant to a fifth race. They are also resistant to Verticillium wilt. Leaves are resistant to leaf scorch and mildew, but quite susceptible to leaf spot.

Sunrise ripens with Earlidawn at Beltsville, but is somewhat later at mid-west test blocks. Yields have been good to very good in the eastern U.S. We suggest Sunrise be tried wherever red stele and Verticillium wilt occur.

✓ MIDWAY (7016)

New . . . Widely Tested . . . Red Stele Resistant
Merits Trial in All Areas

Midway is a cross of Dixieland and Temple that has done well from Massachusetts to Virginia and westward. It ripens in midseason. The berries are medium to large size, have a uniform deep red color with a glossy surface, firm skin and yellow seeds. The flesh is firm. Berries are irregular conic shape but have good dessert quality and have stood up well in the frozen pack.

Plants of Midway are vigorous, highly productive, and resistant to the common race of red stele. The leaves are somewhat susceptible to leaf scorch and leaf spot.

Growers report 1968 crops of Midway were excellent in yield, color, size. Buyers paid high prices for fruit because it carried long distances with a minimum of loss.

DEAR SIRS:

Enclosed find check for to cover truck delivery on trees. Thanks for the excellent trees and delivery service. We set them today and are well pleased.

George Coon
Ohio

✓ CATSKILL (7012) ➔

ONE OF THE VERY GOOD MIDSEASON BERRIES

A vigorous grower, somewhat frost resistant and extremely productive. It has proven itself for many years and is recognized as one of the best midseason berries in cultivation. The foliage is healthy in this latitude. It is a good plant maker and very productive. The berries are large and of good quality. We recommend Virus Free plants of this fine variety for this and more northern areas. Catskill is the Number One midseason variety for the Northeast.

✓ EMPIRE (7021)

Heavy Bearer—Frost Resistant

Empire is a medium early, outstanding berry for the middle and northern berry-producing areas. It is beautiful—larger than Premier, firmer, better carrier, more attractive and a higher yielder than Premier. Empire has always been a vigorous grower. Virus free stocks make it even easier to get good fruiting beds. The high yields of large, glossy red fruit are making this fine berry very popular in the Premier growing sections of the country. Why don't you try some from Bountiful Ridge this year?

✓ GUARDIAN (7028)

A new variety from the U.S.D.A. which ripens 4-5 days later than Surecrop. It is resistant to 5 races of Red Stele, verticillium wilt, leaf scorch and mildew. Berries are large, firm, glossy, and retain an attractive appearance during harvest and marketing. Try some . . . Guardian is expected to be very useful in areas where heavy yielding, late mid-season strawberries are desired.

✓ REDGLOW (7008) ➔

BEAUTY—PRODUCTIVITY—LARGE SIZE
RED STELE RESISTANCE

Redglow is one of our best-looking strawberries. The fruit ripens in early midseason and is large, beautiful, brilliant red, and delicious. The berries hold their size throughout the season and are fairly firm. They are good for freezing and fresh market sales.

Plants of Redglow are vigorous, productive, and resistant to the common type of red stele. This is a real good variety for the middle states area and should be planted in rich, moist soil. It ripens one or two days later than Earldawn.

New "Extra-Special" Kinds

✓ REDCHIEF (7020)

EXCELLENT NEW VARIETY FROM U. S. D. A.

Redchief has been evaluated for yield, horticultural characteristics, and resistance to diseases from Massachusetts to North Carolina and west to Missouri. The best reports on this fine new berry come from the northern areas of the test section.

The berries ripen two to three days later than Surecrop. They are large, firm, glossy, cone shaped, and have a uniform deep red color. Quality is good and is maintained in frozen products.

Plants of Redchief are resistant to five races of red stele, are vigorous, and intermediate in their resistance to Verticillium wilt. The leaves are resistant to leaf scorch and mildew but rather susceptible to leaf spot.

Redchief is suggested for areas where red stele is a problem and where Surecrop has not been productive. Redchief handles well, is rather easy to cap, and seems well adapted for the "pick-your-own" market.

✓ RARITAN (7019)

A NEW MIDSEASON KIND FROM NEW JERSEY

An early midseason to midseason variety that is very productive. Fruits are bright red, glossy and of good to excellent eating quality. Fruits range from large to medium in size and have an attractive cap. Plants form many good runners and produce a good mat. They are not resistant to red stele. The fruit is recommended for fresh market but not for freezing. This new variety was formerly tested as New Jersey 857.

POCAHONTAS (7017) ➔

The Three-Way Strawberry

**FRESH MARKET . . . CANNED . . .
FROZEN PACK**

Outstanding . . . Wonderful . . . My Best Money Maker . . . These are the words used by many of our customers to describe the way they feel about this great berry. Since its release by the U.S.D.A., Pocahontas has climbed to the top of the ladder as a commercial favorite. Time after time it has outyielded all other kinds from the Carolinas to New York and as far west as Ohio and Arkansas. Its extra high vigor gives Pocahontas good picking beds even under adverse conditions.

Yields of Pocahontas often are more than 10,000 quarts of large, beautiful, high quality berries. They have brought high profits on fresh markets everywhere. Pocahontas has been accepted by the processors as an outstanding berry for canning and freezing.

The berries are a bright, glossy red, firm, somewhat conic in shape, and not as tart as Blakemore. Pocahontas ripens about a week later than Blakemore.

TENNESSEE BEAUTY (7022) ➔

Tennessee Beauty is being grown in nearly every eastern and midwestern berry section with the same results . . . **LARGE YIELDS AND HIGH PROFITS.** Berries of Tennessee Beauty are large (size holds well throughout entire season), firm, and outstanding shippers. They are a bright glossy red, holding well without changing color. Tennessee Beauties are of high quality and in demand for processing and freezing as well as for use on fresh markets. They ripen late mid-season to late, and are sure croppers.

Plants are vigorous and free plant makers, always assuring good picking beds of large stocky crowns. Tennessee Beauty can be grown on a wide variety of soils with good results. We recommend it as a sure profit-maker in most all southern, eastern, northern, and midwestern producing areas.

VESPER (7024) (NJ 157) ➔

This fine new berry is the result of a cross of Utah Shippers and Jerseybelle which ripens later than or about with Jerseybelle. It has a long harvest period that extends well into the Redstar season. The fruits are large and pretty. Vesper is the most productive of the selections tested at New Brunswick. It is a good plant maker but is not resistant to red stele or verticillium wilt. It appears that Vesper will do well and should be tried in areas where Jerseybelle is successful.

REDSTAR (7025) Our Very Best Late Berry ➔

A sure bet to continue the good strawberry season. Its large, flavorful berries are certain to make a hit with your customers and family. They ripen a week to ten days after other berries are gone—so late that they are seldom hit by frost, and annual crops are a certainty. The first berries are very large and wedge shaped. Later ones are mostly conic. Flavor is delightfully good for such a late berry. The bright red color is quite attractive and darkens little on holding.

JERSEYBELLE (7023) ➔

Virus Free Vigor and Rich Market Quality

Jerseybelle has brought the highest prices paid for strawberries anywhere since its introduction a few years ago. Jerseybelle has risen to prominence as a highly profitable late midseason berry for growers of New Jersey and Long Island. The berries are bright orange-red, glossy and firm, turning slightly darker upon holding. Jerseybelle has been found best for moderately close and local markets.

Plants make good growth on rich, moist soils and give good picking beds of large, stocky crowns. However, they are not nearly as vigorous as Sparkle, Catskill or Pocahontas. We recommend Jerseybelle for trial in most eastern areas. It has not been found to be very adaptable to midwestern growing conditions where observed.

✓ **EARLIDAWN** (7002) ➔

EARLINESS—FREEZING QUALITY—HIGH YIELDS

Ripening five days before Blakemore and Premier, EARLIDAWN is the earliest of all the good, commercial strawberry varieties. Year after year it has come through with early, large crops of nice market berries.

The berries are quite firm, with a tough skin. Color is a vivid red only slightly darker than Blakemore, which does not become too much darker upon holding. Crops of EARLIDAWN have been outstanding in all areas, with as much as 58% of the crop being harvested in the first week on this fine new variety.

EARLIDAWN makes extra large crowned plants but not too many runner plants. Yet, production is still quite high for such an early berry.

✓ **SPARKLE** (7014)

**A Very Heavy Producer
GOOD FOR FREEZING, TOO**

Sparkle is a prolific plant maker with good healthy foliage, and very productive. Berries are medium size, uniform in shape and have a bright red color, turning somewhat dark on fruits that are over-ripe. The quality of the berry is excellent. Ripens midseason, being a little later than Premier. Requires good moisture for best results. Sparkle is grown extensively in New Jersey, eastern Pennsylvania, New York and New England States.

✓ **ROBINSON** (7013)

**Large Size—Bright Color
A LEADING MARKET BERRY**

Robinson, often called Scarlet Beauty, has those very large attractive berries which catch the customer's eye every time. They are a beautiful bright red color with glossy finish, holding well with little loss of color. Yields are comparable to other leading varieties.

Plants of the Robinson variety are very vigorous, almost always making good picking beds under extreme circumstances. Robinson actually does better in dry seasons than in wet ones because of the tendency to over-produce plants. The berries also hold up better under dry conditions.

✓ **FAIRFAX** (7007) ➔

Queen of the Table Berries

Fairfax ripens about the same time as Premier, and its fruiting season extends over a long period. The quality Fairfax is equal to the best. Berries are large to very large, of a bright red color at picking time. Turns dark after being picked for several days but retains its flavor and firmness.

✓ **MIDLAND** (7006) ⬅

Beauty . . . Size . . . Productivity . . . The Flavor King

Midland from Virus Free Stocks is one of the leaders of early strawberry varieties. Always a favorite as an early berry with outstanding size, beauty, productivity, quality, firmness and freezing ability, Midland can now be profitably grown, thanks to the increased vigor of Virus Free Stocks. Midland will now make good beds of large vigorous plants.

Berries are early, ripening with Premier and Blakemore, and as productive as either, averaging somewhat larger in size. The flavor compares favorably with Fairfax, known generally as our highest quality berry. Freezing tests show Midland to be one of the best for either commercial or home use. We suggest you try this fine variety this year and see if you don't agree that it is most outstanding.

Prices . . .

All Varieties Strawberry Plants

SHIPPING SEASON—We ship from November 15th to June 1st. Earlier orders cannot be accepted because plants will not be sufficiently dormant nor rooted until November 15th. All orders filled after June 1st will be at the purchaser's risk. We will make every effort to see that they arrive in good condition.

PRICES—All prices listed are F.O.B. Princess Anne, Md., and apply only to varieties listed. *Several varieties cannot be combined to obtain a quantity rate!* Please write for special quotation when in need of more than 5,000 of one variety.

POSTAGE—Please see special instructions on page 50.

Number 23

Date June 20, 1969

Certificate of Inspection

This is to Certify, That the nursery stock of Bountiful Ridge Nurseries, Inc.

located at Princess Anne, Somerset County

State of Maryland, has been officially examined in accordance with the laws of Maryland, 1959, Chapter 289, Section 34, and that said nursery and premises were found to be apparently free from dangerously injurious insect pests and plant diseases.

This Certificate does not include nursery stock not grown within this state, unless such stock is previously covered by Certificate and accepted by the State Entomologist and State Plant Pathologist.

Unless sooner revoked, this certificate is valid until September 30, 1970

L.O. Weaver,
State Plant Pathologist

Geo. S. Rufford,
State Entomologist

REGISTERED STRAWBERRY PLANTS

You can be sure that you're planting the best "Virus Free" strawberry plants money can buy if they're from Bountiful Ridge. Our "Virus Free" plants have been grown from stock provided by the U.S.D.A. and the University of Maryland according to their regulations. Since viruses do not produce clear-cut symptoms, but generally weaken the plants, no guarantee can be made that these plants are 100% virus free. Because of the protective measures used on our plants, we believe them to be "essentially virus free."

Everbearing Strawberries

SUPERFECTION (7026)

It's beautiful . . . it's heavy bearing . . . it's "good eatin'". Superfection leads the field of everbearing varieties. Harvest large, red, mouth-watering fruits just 90 days after planting. The plants are vigorous, adapt themselves to a wide range of soils and weather conditions, and produce more heavily in the fall than any other everbearing kind we know. Superfection is best for garden, commercial or local market.

↓ OZARK BEAUTY (7027)

A new everbearing kind that produces large volumes of big, juicy, conical fruits. Flavor is excellent. Plants are vigorous and productive. Ozark Beauty is extra good for freezing. Pick large, luscious berries all season long from this fine variety. Yields have exceeded 12,000 quarts per acre in test plots. Try them.

PLEASE ADD POSTAGE

All express, motor freight, air freight, and bus shipments sent collect for charges unless otherwise specified.

PARCEL POST-UNITED PARCEL-SERVICE—Please add 15% of your total order for postage. We will refund any overage sent to us or bill you for any additional at time of shipment. Distance and the type of plants in your order will cause this formula to vary. Current regulations limit size of parcels. Larger plants will be shipped by other means. Be assured that your order will be sent in the most economical way.

PACKING-HANDLING-INSURANCE . . . Please add 50¢ to each order to cover the cost of expert handling and to insure safe delivery. Additional insurance costs are included in your express and bus charges.

SALES TAX—Any Sales Tax which may be imposed on nursery stock by your State or Federal authority should be added to the amount of your order. You will be advised of any changes or additions which may be made on your order acknowledgment.

REMITTANCE—Payment in full should accompany all orders. Large orders, where satisfactory reference is given, should have 1/4 down with the balance paid at shipping time. Our prices are net, F.O.B. Princess Anne, Md. Delivered prices will be given if you state the size and quantity of plants desired. Prices in this catalog are for Fall 1969 and Spring 1970. PRICES ARE SUBJECT TO CHANGE WITHOUT NOTICE.

SHIPPING SEASON—From October 15th to May 15th. Many items from refrigerated storage may be shipped later than May 15th with success. Depending on weather conditions, the fall season may not begin until November 1st or later. We will not ship plants that are not dormant during the fall season.

BONUS PLANTS

GIVEN FREE with orders of \$10.00 or more

Select from 8 Popular Plants

Get one Bonus Selection with each \$10.00 of order. A \$20.00 order receives two bonus selections, alike or different. A \$30.00 order receives three bonus selections, alike or different. With each additional \$10.00 of order, pick another bonus selection.

You must select your bonus plants when you place your order, or none will be sent. However, if you send another order, you can include bonus plants you overlooked on earlier orders in the same season.

ALSO: We reserve the right to change bonus selections, sending stock of equal or greater value, should we run short of some items.

You are eligible for bonus plants only when you order from this catalog using the prices and quantities listed in it. No bonus plants are allowed on orders booked at discount or commercial grower prices.

Dwarf 5-in-1 APPLE

A REAL APPLE ORCHARD ON JUST ONE TREE

Tree is dwarf—will never grow too big for small garden. That's right! Pick all fruit from the ground. Easy to spray, too. Five luscious varieties that span the season from early to late. Varieties especially selected to provide proper pollination. Dwarf size will let you plant these marvels as close as 10 feet. They require same care as regular apple trees.

Red Delicious • McIntosh
Yellow Delicious • Lodi
Red Rome
